

FmPro Migrator Custom Dev Edition 11.85 Adds Fixed-Price Angular TypeScript Migrations for FileMaker Pro & Visual FoxPro

Layout Conversion Workbench automates high-fidelity conversions of layouts/forms from FileMaker & Visual FoxPro to Angular + TypeScript web applications.

FREMONT, CA, UNITED STATES, September 1, 2026 /EINPresswire.com/ -- .com Solutions Inc. today announced FmPro Migrator Custom Dev Edition 11.85, adding fixed-price Angular + TypeScript migrations for FileMaker Pro and [Visual FoxPro](#) applications through the Layout Conversion Workbench. The Custom Dev Edition includes the automated conversion of up to 5,000 layouts, forms and reports for any FileMaker Pro or Visual FoxPro migration project - delivered as a fixed-price consulting engagement that keeps migration projects within budget.

FmPro Migrator AI Accelerated Edition

Fixed-Price Engagements Keep Complex Projects Within Budget

Legacy migration projects have traditionally carried open-ended consulting costs that made budgeting difficult and delayed project approval. Fixed-price FmPro Migrator Custom Dev Edition pricing enables even the largest and most complex projects to be delivered economically, with [human-centered collaboration](#) powered by the latest foundation AI models.

Because the Layout Conversion Workbench is built around LLM task prompts rather than hard-coded conversion logic, unique project customizations that previously required thousands of lines of custom code are now delivered through updates to the task prompts - tailored individually for each customer when needed. This prompt-based architecture also makes the

Workbench flexible enough to economically test multiple conversion options during the same project - allowing customers to evaluate candidate target frameworks side-by-side before committing to a direction.

Single Source of Truth for the Entire Conversion Project

FmPro Migrator converts binary format files from FileMaker Pro, Visual FoxPro and Microsoft Access into easily machine-readable text files ready for further processing by modern AI coding tools including Claude Code, Cursor, OpenAI Codex and VSCode. FmPro Migrator contains the metadata for the entire conversion project - value lists, scripts, tables and fields, relationships, layouts, and forms/reports - serving as the single source of truth throughout the conversion process.

The Layout Conversion Workbench is unique in its ability to dynamically inject the proper context into each automation task, ensuring LLMs have exactly the information they require during processing. Each generated file is produced from task prompts that automatically receive the relevant layout metadata, field mapping tables, and naming maps - eliminating the naming mismatches and hallucinated identifiers that plague manual AI-assisted conversion efforts. Token-efficient metadata supports hundreds of layout objects without exceeding LLM context limits, and an agentic workflow processes all files with batch processing.

Team of 10 to Team of 1

Using the Layout Conversion Workbench enables full-fidelity automated conversions of layouts, forms and reports - regardless of complexity - by a single developer. Work that previously required a team of ten developers manually recreating forms, wiring data access code, and testing navigation logic is now completed by one developer supervising an automated task sequence.

Modern Frameworks, Enterprise-Class Results

The Layout Conversion Workbench immediately utilizes the latest modern coding frameworks

The image displays two components of the FmPro Migrator software. The top component is a screenshot of the 'Layout Conversion Workbench Angular + TypeScript REST DEV Window'. It features a table of conversion projects with columns for 'Src', 'Version', and 'Conversion Name'. The table lists several projects, including 'Angular + TypeScript - REST API', 'Angular 20+ Web Application + TypeScript', 'CakePHP 5.3 Web Application + PHP', 'Django Web Application + Python', 'React Native + TypeScript + CLI', 'React Native + TypeScript + Expo', and 'Svelte 5 + TypeScript + Electrobus Desktop App'. Below the table, there are fields for 'Conversion Name: (Unique)', 'Version: 1.00', and 'System Prompt:'. The 'System Prompt' field contains a detailed role description for a Senior Angular Front-End Architect. The bottom component is a diagram titled 'FmPro Migrator Site License Server Diagram'. It shows a central server icon labeled 'FmPro Migrator Site License Edition Server' connected by blue arrows to four laptop icons, representing a distributed network of devices connected to the central server.

David Simpson

and design methodologies to upgrade legacy apps, scaling desktop applications up to enterprise-class web or binary applications based upon the selected conversion feature. The new Angular + TypeScript conversion transforms legacy desktop database layouts into modern, component-based Angular web applications built with TypeScript - reproducing the original forms with high fidelity, including tab controls, portals/grids, radio and checkbox groups, and value list menus, and generating project files ready for immediate development in Claude Code, Cursor, GitHub Copilot and OpenAI tools.

Additional available and planned conversions include .NET XAML WPF + EF Core (C# and VB), *ASP .NET C#, *Angular + TypeScript + Java SpringBoot, *CakePHP 5.x, *Node.JS, Python + Django, *React Native + TypeScript (CLI and Expo), and *.NET MAUI XAML + MVVM + C#.

The Custom Dev Edition includes the same features as FmPro Migrator Site License Edition, including running local LLMs via Ollama, without requiring the longer-term commitment or included server hardware.
