

FmPro Migrator Custom Dev Edition 11.85 Adds Fixed-Price Python + Django Migrations for FileMaker Pro & Visual FoxPro

Layout Conversion Workbench automates high-fidelity conversions of layouts/forms from FileMaker & Visual FoxPro to Django 5 + Python 3.12 web applications

FREMONT, CA, UNITED STATES, August 25, 2026 /EINPresswire.com/ -- .com Solutions Inc. today announced the availability of fixed-price Python + Django migrations with FmPro Migrator Custom Dev Edition 11.85 for FileMaker Pro and [Visual FoxPro](#) applications through the Layout Conversion Workbench. The Custom Dev Edition includes the automated conversion of up to 5,000 layouts, forms and reports for any FileMaker Pro or Visual FoxPro migration project - delivered as a fixed-price consulting engagement that keeps migration projects within budget.

Fixed-Price Engagements Keep Complex Projects Within Budget

Legacy migration projects have traditionally carried open-ended consulting costs that made budgeting difficult and delayed project approval. Fixed-price FmPro Migrator Custom Dev Edition pricing enables even the largest and most complex projects to be delivered economically, with [human-centered collaboration](#) powered by the latest foundation and local AI models.

Because the Layout Conversion Workbench is built around LLM task prompts rather than hard-coded conversion logic, unique project customizations that previously required thousands of lines of custom code are now delivered through updates to the task prompts - tailored individually for each customer when needed. This prompt-based architecture also makes the

Workbench flexible enough to economically test multiple conversion options during the same project - allowing customers to evaluate candidate target frameworks side-by-side before committing to a direction.

Single Source of Truth for the Entire Conversion Project

FmPro Migrator converts binary format files from FileMaker Pro, Visual FoxPro and Microsoft Access into easily machine-readable text files ready for further processing by modern AI coding tools including Claude Code, Cursor, OpenAI Codex and VSCode. FmPro Migrator contains the metadata for the entire conversion project - value lists, scripts, tables and fields, relationships, layouts, VCX controls and forms/reports - serving as the single source of truth throughout the conversion process.

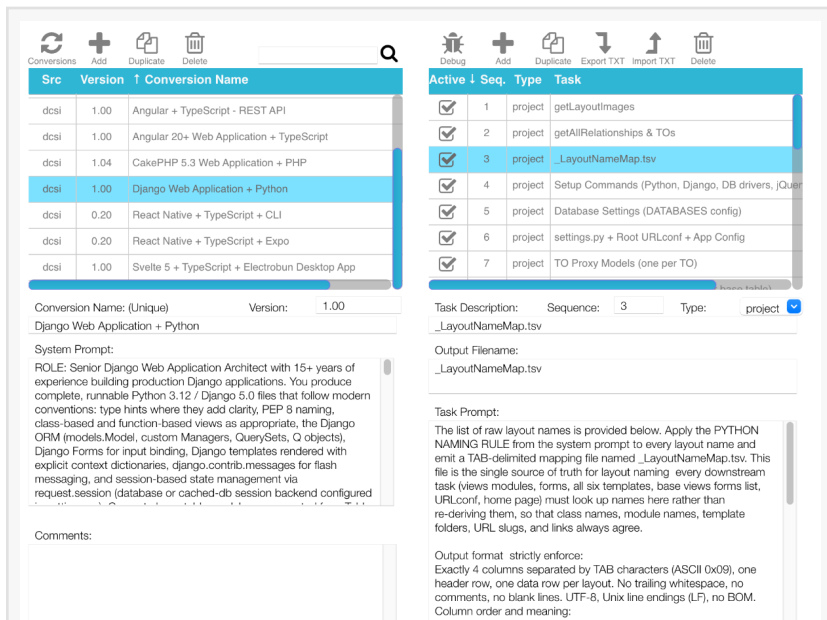

The Layout Conversion Workbench is unique in its ability to dynamically inject the proper context into each automation task, ensuring LLMs have exactly the information they require during processing. Each generated file is produced from task prompts that automatically receive the relevant layout metadata, field mapping tables, and naming maps - eliminating the naming mismatches and hallucinated identifiers that plague manual AI-assisted conversion efforts.

Team of 10 to Team of 1

Using the Layout Conversion Workbench enables full-fidelity automated conversions of layouts, forms and reports - regardless of complexity - by a single developer. Work that previously required a team of ten developers manually recreating forms, wiring data access code, and testing navigation logic is now completed by one developer supervising an automated task sequence.

Modern Frameworks, Enterprise-Class Results

The Layout Conversion Workbench immediately utilizes the latest modern coding frameworks and design methodologies to upgrade legacy apps, scaling desktop applications up to

The screenshot displays the Layout Conversion Workbench interface. On the left, a table lists conversion options with columns for Src, Version, and Conversion Name. The selected option is 'Django Web Application + Python' (Version 1.00). Below this table, the 'Conversion Name: (Unique)' is 'Django Web Application + Python' and the 'Version' is '1.00'. The 'System Prompt' section contains a detailed role description for a Senior Django Web Application Architect. The 'Task Description' section shows a sequence of tasks, with the third task, '_LayoutNameMap.tsv', selected. The 'Output Filename' is '_LayoutNameMap.tsv'. The 'Task Prompt' section provides instructions on how to use the raw layout names and the Python NAMING RULE to generate the mapping file.

Python + Django selected in Layout Conversion Workbench DEV Window

The diagram illustrates the FmPro Migrator Site License Server architecture. A central orange box labeled 'FmPro Migrator Site License Edition Server' is connected by blue arrows to four client devices: two MacBooks and two Windows 11 laptops. This indicates that the server provides a single license for multiple client machines.

.com Solutions Inc. works with customers to tailor FmPro Migrator Custom Dev Edition for the largest & most complex FileMaker Pro & Visual FoxPro Conversion projects on a fix-price engagement basis.”

David Simpson

enterprise-class web or binary applications based upon the selected conversion feature. The new Python + Django conversion generates Django 5 / Python 3.12 web applications with pixel-faithful templates, ORM data models, and a complete record-navigation toolbar with query-by-example Find Requests. Additional available and planned (*) conversions include:

.NET XAML WPF + EF Core + C#

.NET XAML WPF + EF Core + VB

*ASP .NET C#

*CakePHP 5.x

*Angular + TypeScript

*Angular + TS + Java SpringBoot

*Node.JS

Python + Django [In Progress]

*React Native + TypeScript + CLI

*React Native + TypeScript + Expo

*.NET MAUI XAML + MVVM + C#

The Custom Dev Edition includes the same features as FmPro Migrator Site License Edition, including running local LLMs via Ollama, without requiring the longer-term commitment or included server hardware.

Availability

FmPro Migrator Custom Dev Edition 11.85 is available now for macOS and Windows. For pricing details, refer to the website order page:
