

PixAI Launches Mio.2, a Chat-Based Anime AI Assistant That Turns Ideas Into Illustrations

Mio.2 helps users create anime-style illustrations, characters, comics, and stories through natural conversation, with no prompt engineering required.

NEW YORK CITY, NY, UNITED STATES, July 9, 2026 /EINPresswire.com/ -- [PixAI](#), an anime-style AI art platform and creator community, is expanding access to anime AI creation with [Mio.2](#), its conversational AI creative assistant designed to help users generate anime-style illustrations through simple chat.

With Mio.2, users can describe what they want in natural language, refine results through conversation, and create high-quality anime-style images without writing complex prompts or adjusting detailed parameters. As PixAI continues to strengthen its anime-focused model technology through Tsubaki.2, Mio.2 brings those capabilities into a more approachable interface, turning improvements in prompt understanding, composition, and visual storytelling into a creation experience users can feel directly.

The assistant is built around a chat-based workflow. Users can start with a character concept, outfit, scene, or story direction, then continue refining the result in the same conversation by changing the angle, adjusting the outfit, refining the character, or developing the scene further.

Mio.2 supports two modes for different stages of creation: Ideation mode for brainstorming and refining ideas, and Default mode for generating images and comparing multiple outputs.

Users can also choose chat models and output quality settings based on task complexity. Kotone is the default model for most requests, while Sena and Osaki are designed for more complex creative tasks.

Mio.2 supports anime-style workflows across character creation, visual refinement, and story-driven production. Users can create original characters and expand them into three-view sheets, chibi versions, outfit variations, or expression sets. It also supports manga and light-novel scene illustration, comic cover concepts, sequential storyboards, wallpaper-quality images, and multi-character visual ideas while helping maintain consistent style and character direction across follow-up requests.

This no-prompt workflow is useful for both new and experienced creators. New users can begin with a plain description instead of learning prompt engineering first, while character designers, anime-style illustrators, light novel creators, manga creators, and visual content teams can use Mio.2 to test character concepts, compare variations, and develop story-driven visuals within the same creative flow.

“Mio.2 brings PixAI’s anime-focused model capabilities into a more natural creative interface,” said a Mewtant spokesperson. “By combining Tsubaki.2’s strengths in composition, character detail, and storytelling with a chat-based workflow, Mio.2 helps users describe, refine, and create finished anime art through conversation.”

As PixAI continues to grow across global creator markets, Mio.2 reinforces its long-term vision: guided by the slogan “Imagination, made real,” PixAI combines proprietary anime-focused model technology with a no-prompt conversational interface to make anime-style creation more

Your AI Anime Agent — Mio.2

Tell Mio what's on your mind! Your words can come to life as illustrations or manga. So, what shall we create first?

 Draw me a knight raising a sword against a dragon

 Kotone v1

About PixAI

PixAI is an anime-style AI art platform. Powered by its proprietary image foundation model, PixAI has been trusted by 15 million+ registered users across the US, Korea, and Japan since 2022. The platform offers a full creative toolkit — from anime-style illustration and image generation to image-to-video — alongside a social gallery where creators generate over 200 million artworks every month. Its conversational assistant, Mio, lets anyone turn a plain description into finished anime art, no prompts required.
