

HCM TradeSeal Updates WageFinder with 1.8M+ Wage Records, Free Searches, and API Access

With expanded data coverage and new developer tools, WageFinder helps organizations reduce manual research and streamline compliance workflows.

ANN ARBOR, MI, UNITED STATES, July 14, 2026 /EINPresswire.com/ -- HCM TradeSeal announced a major update to [WageFinder](https://wagefinder.org), its prevailing wage data platform, making it easier than ever for contractors, payroll professionals, compliance teams, and software providers to access the wage information they need.

WageFinder from HCM TradeSeal

The latest version of WageFinder introduces unlimited free wage searches, the new WageFinder API, a refreshed user experience, faster and more intuitive search capabilities, and a significantly expanded prevailing wage database that now includes more than 1.8 million wage records spanning multiple agencies and historical years. The update has also tripled the amount of wage data available on the platform, giving users access to a broader collection of prevailing wage determinations across federal, state, and local sources.

Historically, prevailing wage information has been scattered across multiple government websites and lengthy PDF documents, making it difficult to locate and use. WageFinder simplifies that process by transforming complex wage determinations into a searchable, structured database that helps organizations quickly find, understand, and utilize prevailing wage data.

Unlimited Free Access to Prevailing Wage Data

With this update, WageFinder now offers unlimited free searches, allowing users to search, filter, and explore prevailing wage information without search limits.

The platform is designed to make prevailing wage data more accessible for everyone involved in compliance, from contractors researching wage determinations to payroll teams validating wage

and fringe benefit requirements.

A Faster, Smarter Search Experience

The updated WageFinder experience is designed to help users spend less time searching and more time getting work done.

Enhancements include:

- A refreshed, modern interface
- Faster search performance
- Intelligent search with typo correction and auto-complete suggestions
- Improved search relevance for more accurate results
- Better overall platform speed and responsiveness

Whether users are searching by job classification, location, or prevailing wage determination, WageFinder delivers faster, more accurate results.

Expanded Data Across Federal, State, and Local Agencies

WageFinder now contains more than 1.8 million prevailing wage records collected from federal, state, and local agencies across multiple years. The platform has tripled its wage data since its initial launch, providing one of the industry's most comprehensive prevailing wage resources.

Current coverage includes:

- Federal Davis-Bacon wage determinations
- California
- Illinois
- Washington
- Ohio
- Houston, Texas

HCM TradeSeal will continue expanding coverage by adding additional state and municipal wage determinations in future releases.

Introducing the WageFinder API

The update also introduces the WageFinder API, making it easier for software providers, payroll companies, compliance platforms, and enterprise organizations to integrate prevailing wage data directly into their own systems.

Through the new API and interactive API Explorer, users can build requests, preview results, test integrations, and access structured prevailing wage data without manually searching government websites or parsing lengthy PDF documents.

Organizations requiring API access can obtain an API key to unlock expanded capabilities, higher usage limits, and additional prevailing wage and fringe benefit data for enterprise applications and software integrations.

Built for the Entire Prevailing Wage Community

WageFinder supports everyone involved in prevailing wage compliance, including:

- Contractors and subcontractors
- Payroll and HR professionals
- Compliance teams
- Certified payroll administrators
- Payroll service providers
- Software developers and technology partners

By making prevailing wage data easier to search, access, and integrate, WageFinder helps organizations reduce manual research, improve payroll accuracy, and strengthen compliance efforts.

Looking Ahead

This major platform update lays the foundation for continued innovation across WageFinder. Future enhancements will expand state and municipal coverage, add greater depth to union wage information, and introduce new integrations with HCM TradeSeal, including the upcoming WageIntelligence feature that will bring prevailing wage intelligence directly into payroll compliance workflows.
