

eSkilled Introduces Powerful New Analytics & AI Reporting Capabilities to eSkilled SMS

New AI reporting and analytics help RTOs turn live SMS and LMS data into faster, smarter decisions with interactive dashboards and plain-English queries.

BRISBANE, AUSTRALIA, September 8, 2026 /EINPresswire.com/ -- New AI-powered reporting capabilities transform how RTOs access, analyse and act on live data across their [student management system](#).

eSkilled has announced the release of RTO Analytics & AI Reporting, a major new capability built into eSkilled Student and Learning Management System, giving Registered Training Organisations (RTOs) instant access to live operational insights, AI-powered reporting and interactive dashboards—all from within their existing [RTO software](#).

The release further strengthens eSkilled's all-in-one RTO compliance management system, combining a comprehensive student management system (SMS) and learning management system (LMS) with advanced analytics designed specifically for the Australian vocational education and training sector.

Every day, RTOs rely on data to make decisions about enrolments, learner progress, compliance, finance and organisational performance. However, accessing that information often requires manual exports, spreadsheets or specialist reporting knowledge, slowing decision-making and reducing visibility across the organisation. Analytics & AI Reporting has been developed to remove those barriers by enabling staff to access live data quickly, securely and without technical expertise.

"RTOs already have the data they need to make informed decisions—it's simply been too difficult to access," said Scott Rogers, eSkilled CEO. "We've built the RTO Analytics & AI Reporting directly into eSkilled RTO software so every member of an RTO can ask questions, build reports and monitor performance using live operational data, without relying on spreadsheets or complex reporting tools."

The new capability allows users to build reports across 29 reportable entities and more than 650 reportable fields, covering students, enrolments, trainers, finance, attendance, quality management, risk management, continuous improvement, [AVETMISS](#) data and much more. Reports can be created using a simple point-and-click interface or generated instantly by describing the desired report in plain English using AI.

For example, users can simply ask:

"Which trainers have credentials expiring in the next 90 days?"

"Show me outstanding invoices over 30 days by program."

"Which qualifications have the highest withdrawal rates this year?"

The AI automatically selects the appropriate data, applies filters, builds visualisations and produces a fully configured report in seconds, dramatically reducing the time traditionally spent preparing management and compliance reports.

In addition to AI-powered report generation, the release introduces AI Chat with Your Data, enabling staff to ask operational questions in natural language and receive immediate answers backed by live SMS data. From monitoring attendance and completion rates to reviewing financial performance, compliance activities and quality management indicators, users can access actionable insights without understanding database structures or reporting logic.

Designed specifically for RTOs, Analytics & AI Reporting delivers tailored dashboards and reporting capabilities for CEOs, RTO managers, training coordinators, compliance officers, finance teams, trainers and administration staff. Live KPI dashboards, automated report scheduling, proactive AVETMISS data quality monitoring, trainer credential tracking and organisation-wide reporting provide greater visibility across every area of the business.

Security has been built into every layer of the solution. All reports and AI queries respect existing user permissions within the RTO software, ensuring staff only access information appropriate to their role. AI responses are generated using sanitised, permission-controlled data, while comprehensive audit logging provides a complete record of reporting and AI activity to support governance and regulatory compliance.

As part of the broader eSkilled ecosystem, Analytics & AI Reporting provides training organisations with a single solution that combines student management, online learning delivery, compliance and advanced business intelligence within one connected platform.

Analytics & AI Reporting is available in eSkilled SMS & LMS in August 2026.
