

Bronchoscope Market Outlook 2030: Market Size, CAGR, Trends And Forecast Analysis

*The Business Research Company's
Bronchoscope Global Market Report 2026
– Market Size, Trends, And Forecast 2026-2035*

LONDON, GREATER LONDON, UNITED KINGDOM, July 14, 2026
/EINPresswire.com/ -- [Bronchoscope market](#) to surpass \$6 billion in 2030. Within the broader Medical Equipment industry, which is expected to be \$1,176 billion by 2030, the Bronchoscope market is estimated to account for nearly 0.5% of the total market value.

Which Will Be The Biggest Region In The Bronchoscope Market In 2030? North America will be the largest region in the bronchoscope market in 2030, valued at \$1.8 billion. The market is expected to grow from \$1.1 billion in 2025 at a compound annual growth rate (CAGR) of 10%. The strong growth can be attributed to the rising prevalence of respiratory disorders such as lung cancer, chronic obstructive pulmonary disease (COPD), and asthma, increasing adoption of minimally invasive pulmonary diagnostic procedures, growing demand for advanced visualization technologies in bronchoscopy systems, expanding healthcare infrastructure and hospital investments in pulmonary care, and favorable reimbursement frameworks supporting bronchoscopic diagnostic and therapeutic procedures across the region.

Which Will Be The Largest Country In The Global Bronchoscope Market In 2030? The USA will be the largest country in the bronchoscope market in 2030, valued at \$1.6 billion.

The market is expected to grow from \$1.0 billion in 2025 at a compound annual growth rate (CAGR) of 10%. The strong growth can be attributed to the increasing number of bronchoscopy procedures performed for early lung disease detection, strong presence of leading medical device manufacturers and pulmonary care centers, rising adoption of disposable bronchoscopes to reduce cross-contamination risks, growing technological advancements in high-definition imaging and robotic bronchoscopy platforms, and increasing awareness regarding early diagnosis and treatment of respiratory diseases among healthcare providers and patients.

What Will Be The Largest Segment In The Bronchoscope Market In 2030?

The bronchoscope market is segmented by type into rigid bronchoscopes and flexible bronchoscopes. The flexible bronchoscopes market will be the largest segment of the bronchoscope market segmented by type, accounting for 63% or \$4 billion of the total in 2030. The flexible bronchoscopes market will be supported by the increasing preference for minimally invasive diagnostic and therapeutic pulmonary procedures, superior maneuverability and patient comfort offered by flexible devices, rising use in intensive care units and emergency airway management applications, growing adoption in outpatient and ambulatory care settings, and continuous advancements in imaging quality, portability, and single-use bronchoscope technologies.

The bronchoscope market is segmented by usability into reusable bronchoscopes and disposable bronchoscopes.

The bronchoscope market is segmented by application into diagnosis and treatments.

The bronchoscope market is segmented by end user into hospitals, clinics, ambulatory surgical centers, and other end users.

What Is The Expected CAGR For The Bronchoscope Market Leading Up To 2030?

The expected CAGR for the bronchoscope market leading up to 2030 is 12%.

What Will Be The Growth Driving Factors In The Global Bronchoscope Market In The Forecast Period?

The rapid growth of the global bronchoscope market leading up to 2030 will be driven by the

following key factors that are expected to increase demand for respiratory disease and lung cancer diagnostics, strengthen investments in advanced bronchoscopy infrastructure, and accelerate technological advancements in bronchoscopic imaging and visualization systems globally.

Growing Burden Of Respiratory Diseases And Lung Cancer - The growing burden of respiratory diseases and lung cancer is expected to become a major growth driver for the bronchoscope market by 2030. The increasing prevalence of chronic obstructive pulmonary disease (COPD), asthma, pulmonary infections, and lung cancer is driving demand for advanced bronchoscopic diagnostic and therapeutic procedures. Healthcare providers are increasingly utilizing bronchoscopes for early-stage disease detection, tissue biopsy collection, airway examination, and minimally invasive interventions. Rising smoking rates, air pollution exposure, and aging populations are further contributing to the growing incidence of respiratory conditions worldwide. This expanding patient population is accelerating the adoption of advanced bronchoscopy systems across hospitals and specialty pulmonary centers. As a result, the growing burden of respiratory diseases and lung cancer is anticipated to contribute approximately 2.9% annual growth to the market.

Growing Hospital Investment In Bronchoscopy Suites - Growing hospital investment in bronchoscopy suites is expected to emerge as a significant factor driving the expansion of the bronchoscope market by 2030. Hospitals and healthcare systems are increasing investments in specialized pulmonary care infrastructure to improve procedural efficiency, patient throughput, and respiratory disease management capabilities. The expansion of dedicated bronchoscopy suites equipped with advanced imaging platforms, robotic-assisted systems, and infection control technologies is strengthening procedural adoption across both developed and emerging healthcare markets. In addition, healthcare providers are focusing on upgrading endoscopy departments to support increasing patient volumes and improve clinical outcomes. Consequently, growing hospital investment in bronchoscopy suites is projected to contribute around 2.1% annual growth to the market.

Technological Advances In Optics And Imaging - Technological advances in optics and imaging are expected to act as a key growth catalyst for the bronchoscope market by 2030. Continuous innovation in high-definition visualization systems, narrow-band imaging, digital bronchoscopy, and robotic-assisted navigation technologies is improving diagnostic precision and procedural effectiveness. Advanced imaging capabilities enable physicians to detect smaller lesions, improve airway visualization, and perform more accurate minimally invasive interventions. Manufacturers are also focusing on portable and single-use bronchoscope technologies that enhance accessibility and reduce cross-contamination risks in clinical settings. As healthcare providers increasingly adopt technologically advanced bronchoscopy platforms, demand for next-generation systems is expected to rise steadily. Therefore, technological advances in optics and imaging are projected to contribute approximately 1.9% annual growth to the market.

What Are The Key Growth Opportunities In The Bronchoscope Market In 2030?

The most significant growth opportunities are anticipated in the rigid bronchoscopes market and the flexible bronchoscopes market. Collectively, these segments are projected to contribute over \$2 billion in market value by 2030, driven by rising demand for minimally invasive pulmonary procedures, increasing prevalence of chronic respiratory diseases requiring early diagnosis and treatment, growing adoption of single-use bronchoscopy systems for infection prevention, and continuous technological advancements in high-definition imaging and robotic-assisted bronchoscopy platforms. This momentum reflects the healthcare industry's increasing focus on improving respiratory care outcomes, enhancing procedural accuracy, and expanding access to advanced pulmonary diagnostic technologies, accelerating growth across the global bronchoscopy ecosystem.

The rigid bronchoscopes market is projected to grow by \$1 billion and the flexible bronchoscopes market by \$1 billion over the next five years from 2025 to 2030.

Learn More About [The Business Research Company](https://www.thebusinessresearchcompany.com)

The Business Research Company (www.thebusinessresearchcompany.com) is a leading market intelligence firm renowned for its expertise in company, market, and consumer research. We have published over 30,000+ reports across 27 industries and 60+ geographies. Our research is powered by 1,500,000 datasets, extensive secondary research, and exclusive insights from interviews with industry leaders.

We provide continuous and custom research services, offering a range of specialized packages tailored to your needs, including Market Entry Research Package, Competitor Tracking Package, Supplier & Distributor Package and much more.
