

Polar Tint Parker North Explains Colorado's Front and Rear Tint Law

Colorado's first Polar Tint location helps Front Range drivers navigate a 27% VLT rule that covers both front and rear side windows.

PARKER, CO, UNITED STATES, July 15, 2026 /EINPresswire.com/ -- Polar Tint Parker North, the first Colorado location in the Polar Tint network, is helping Front Range drivers understand a rule that trips up many newcomers and long-time residents alike: Colorado's window-tint law is stricter than several neighboring states, regulating minimum visible light transmission (VLT) on both front side windows and rear side windows, not just the front.

Polar Tint, serving the Denver Tech Center and surrounding Colorado communities.

Colorado requires a minimum of 27% VLT on both front and rear side windows for passenger vehicles — a narrower legal range than Nevada, where the front-side minimum is 35% but rear side and back windows can be tinted to any darkness. Drivers relocating to the Denver Metro area from other states, or those simply going by habit or online advice from elsewhere, can end up with a legal front-window tint paired with an illegal rear-window tint without realizing it. Polar Tint Parker North measures every vehicle's glass with a light meter before and after installation and installs strictly within Colorado's limits.

The distinction matters beyond the letter of the law. Colorado's Front Range sits at over 5,000 feet of elevation, where UV intensity is measurably higher year-round than at sea level — one of the reasons Polar Tint's product line, engineered for high-UV climates, extended into the Colorado market this year. Properly measured, legal tint still delivers meaningful heat and UV rejection on both front and rear glass; the studio's approach is to hit the performance customers want without stepping outside what Colorado law allows.

Beyond automotive tint, Polar Tint Parker North installs paint protection film and ceramic coating, both particularly relevant on the Front Range, where winter road de-icing chemistry and gravel from the I-25 corridor and E-470 toll loop can etch and chip unprotected paint. The studio serves Parker, Castle Rock, Lone Tree, Highlands Ranch, Centennial, Aurora South, Castle Pines, and the broader Southeast Denver Metro area.

Drivers can book a free in-shop estimate by calling (720) 954-2853 or visiting parkernorth.polartint.com.

About Polar Tint Parker North

Polar Tint Parker North is a window film, paint protection film, and ceramic coating studio at 10232 Progress Ln, Parker, CO 80134 — the first Colorado location in the Polar Tint network. The studio serves Parker, Castle Rock, Lone Tree, Highlands Ranch, Centennial, and the Southeast Denver Metro area, and installs to Colorado's window-tint standard (27% minimum VLT on front and rear side windows) backed by the Lifetime Polar Tint Promise. Learn more or request an estimate at parkernorth.polartint.com or by calling (720) 954-2853.

Polar Tint Parker North is part of the Polar Tint network, which also serves Henderson, Summerlin, and Spring Valley Ranch, Nevada under the same Lifetime Polar Tint Promise. Learn more about the full network at polartint.com, or about franchise ownership opportunities at polartintfranchise.com.
