

G3 Enterprises Supports California Ag Harvest Transportation with GPS Visibility and Real Time Logistics Coordination

G3 Enterprises provides GPS-based shipment visibility and real-time logistics coordination to support California agricultural harvest transportation.

MODESTO, CA, UNITED STATES, July 16, 2026 /EINPresswire.com/ -- [G3 Enterprises](#) continues to support California growers and agricultural producers with harvest transportation services designed to improve visibility, communication, and confidence during one of the most time important periods of the year.

G3 Enterprises supports California agricultural harvest transportation with specialized equipment, GPS visibility, and real-time logistics coordination.

As California agriculture moves through harvest, growers need transportation partners who understand the importance of timing, equipment readiness, and product visibility. G3's [agricultural transportation services](#) help move wine grapes and other crops with an experienced team, a large fleet, and logistics processes built around harvest demands.

G3's expertise and experience within California has allowed us to expand to support more crops. From grapes to rice to pistachios, almonds, and walnuts, our ability to carefully move agricultural products from the field to a processing facility with confidence.

A key part of that support is GPS-based visibility. G3 uses GPS data across agricultural transportation equipment to help provide real time tracking during crop movement. This gives growers and logistics teams better insight into where crops are during transport and helps support more informed communication throughout the harvest process.

"Harvest transportation is about more than moving product from one location to another," said Josh Little, Director of Ag Operations at G3 Enterprises. "Growers need to know their crops are moving efficiently and safely. Real-time GPS-based tracking helps us provide that transparency

during a very important window of the agricultural season.”

G3’s ag transportation services are built for the demands of California harvest operations. The company supports growers with equipment, logistics planning, and 24-hour operational support during peak periods. With GPS equipped gondolas, super hoppers, flatbeds, and other transportation resources, G3 helps customers monitor movement and reduce uncertainty when timing matters most.

This approach is especially valuable during harvest, when crop quality, processing windows, and transportation schedules must align closely. Better visibility allows logistics teams to respond quickly, communicate more clearly, and help growers make timely decisions as conditions change in the field or at receiving locations.

“California growers work within tight harvest timelines, and transportation plays a major role in protecting crop value,” said Jeff Redouty, Vice President of Ag and Minerals at G3 Enterprises. “Our team combines experienced carriers, reliable equipment, and GPS based visibility to help customers manage those timelines with greater confidence.”

G3 Enterprises has long supported California agriculture through transportation and logistics services tailored to seasonal and year-round crop movement. Its focus on operational readiness, equipment maintenance, communication, and visibility helps growers and agricultural businesses move product with greater efficiency during harvest and beyond.
