

Live Biotherapeutics Market Outlook 2030: Market Size, CAGR, Trends And Forecast Analysis

The Business Research Company's Live Biotherapeutics Global Market Report 2026 – Market Size, Trends, And Forecast 2026-2035

LONDON, GREATER LONDON, UNITED KINGDOM, July 17, 2026

/EINPresswire.com/ -- The live

biotherapeutics sector is emerging as a significant area of growth in healthcare, driven by advancements in microbiome science and increasing recognition of the benefits these products offer. As the market evolves, understanding its current status, key growth factors, and regional dynamics provides valuable insight into its promising future.

Projected Growth Trajectory in the [Live Biotherapeutics Market](#)

The live biotherapeutics market has seen rapid expansion in recent years and is projected to continue this trend. From a market size of \$92.31 billion in 2025, it is expected to increase to \$105.62 billion in 2026, representing a robust compound annual growth rate (CAGR) of 14.4%. This growth during the historical period has been driven by factors such as the rising incidence of gastrointestinal and metabolic diseases, increased clinical use of probiotics, expanding early-stage microbiome research, heightened awareness about gut health, and limited availability of targeted biological treatments.

Looking further ahead, this market is forecasted to surge to \$182.52 billion by 2030, with a CAGR of 14.7% from 2026 onward. Key contributors to this future growth include technological advances in precision microbiome engineering, more frequent regulatory approvals for live biotherapeutic products, increased investment in microbiome-based drug development, broader adoption of personalized medicine techniques, and a growing preference for non-antibiotic

targeted therapies. Anticipated trends include the integration of microbiome-based treatments into hospital protocols, wider use of personalized microbiome modulation, improved standardization and regulatory alignment of products, more clinical trials for engineered microbial therapies, and rising demand for alternatives to antibiotics in managing chronic diseases.

Defining Live Biotherapeutics and Their Therapeutic Role

Live biotherapeutics consist of medicinal products containing living microorganisms, such as bacteria or yeasts, designed to prevent, treat, or manage human diseases. These products function by interacting with a person's microbiota or physiological systems to deliver therapeutic benefits. They are developed within stringent pharmaceutical guidelines that ensure their safety, quality, and effectiveness.

Rising Impact of Gastrointestinal Disorders on Market Growth

One of the main factors propelling the live biotherapeutics market is the increasing prevalence of gastrointestinal disorders and inflammatory bowel diseases (IBD). These chronic conditions affect the digestive system and lead to symptoms such as inflammation, immune dysfunction, abdominal pain, diarrhea, and tissue damage. Unhealthy eating habits and the high consumption of processed foods contribute significantly to gut microbiota disruption, which in turn causes chronic inflammation. Live biotherapeutics offer a solution by restoring microbial balance, enhancing gut health, reducing inflammation, and providing precise microbiome-targeted therapies for these digestive ailments.

For example, data from February 2025 shared by Crohn's & Colitis Australia projects that the number of IBD cases in Australia will rise from 20,511,881 in 2023 to 23,067,771 by 2030. This anticipated increase underscores the growing need for effective treatments like live biotherapeutics, further driving market expansion.

Regional Leaders and Emerging Markets in Live Biotherapeutics

In 2025, North America held the largest share of the live biotherapeutics market, maintaining its position as a dominant region due to advanced healthcare infrastructure and strong investment in research and development. Meanwhile, the Asia-Pacific region is expected to witness the fastest growth over the forecast period, fueled by rising healthcare awareness, increasing prevalence of chronic diseases, and expanding microbiome research initiatives. Other regions covered in market analyses include South East Asia, Western Europe, Eastern Europe, South America, the Middle East, and Africa, each contributing uniquely to the global landscape of live biotherapeutics.

The 2026 edition of our market reports now delivers enhanced analytical coverage through

market attractiveness scoring and analysis, total addressable market (TAM) analysis, company scoring matrix graphics and tables, Excel-based forecasting dashboards, market hotspots infographics, key technologies and future trend analysis, plus updated graphics and tables.

Learn More About [The Business Research Company](#)

With over 30,000+ reports from 27 industries covering 60+ geographies, The Business Research Company has built a reputation for offering comprehensive, data-rich research and insights. Armed with 1,500,000 datasets, the optimistic contribution of in-depth secondary research, and unique insights from industry leaders, you can get the information you need to stay ahead. Our flagship product, the Global Market Model (GMM), is a premier market intelligence platform delivering comprehensive and updated forecasts to support informed decision-making.
