

Tundra Technical Solutions achieves ISO/IEC 42001 certification with DNV

TORONTO, ONTARIO, CANADA, July 21, 2026 /EINPresswire.com/ -- Tundra Technical Solutions has achieved certification to [ISO/IEC 42001](#), the international standard for Artificial Intelligence Management Systems (AIMS), following an independent audit by DNV. This milestone marks Tundra as the first client certified by DNV in Canada to this emerging global standard.

ISO/IEC 42001 provides a structured framework for organizations to establish, implement, maintain, and continually improve the process governance of artificial intelligence systems. The standard addresses key topics including transparency, accountability, risk management to ensure safe, responsible and ethical AI development, implementation and use.

“

ISO/IEC 42001 is a significant step forward in building trust in AI. Tundra Technical Solutions demonstrates leadership through structured and responsible AI process governance.”

Emily Delisle, Managing Director, Business Assurance, Region NA, for DNV

Tundra Technical Solutions is a global provider of talent acquisition solutions and services, supporting organizations in accessing highly skilled professionals across industries.

By achieving ISO/IEC 42001 certification, Tundra demonstrates its commitment to the responsible development and deployment of AI technologies, ensuring that AI-related processes are controlled, transparent, and aligned with recognized international best practices.

“Every organization building AI capability eventually reaches the same realization: the stack does not run on technology alone, it runs on people. We didn’t build this practice to chase a trend; we’ve been placing the talent behind AI initiatives for years. ISO/IEC 42001 now adds independent validation of the management discipline behind that work,” stated Micah Williams, CEO, Tundra Technical Solutions. “It’s critical to ensure that these systems are developed and

managed with integrity, accountability, and trust."

DNV conducted a comprehensive assessment of Tundra's AI management system, verifying alignment with the requirements of ISO/IEC 42001. The certification confirms that Tundra has established processes to identify and mitigate risks, ensure compliance, and promote continuous improvement in AI-related activities.

"ISO/IEC 42001 is a significant step forward in establishing trust in AI," said Emily Delisle, Managing Director, Business Assurance, Region North America, for DNV. "We are pleased to support Tundra Technical Solutions as our first certified client in Canada under this standard, demonstrating leadership in adopting structured and responsible AI process governance."

As organizations increasingly integrate AI into core business processes, certification to ISO/IEC 42001 provides stakeholders with confidence that AI systems are managed transparently in a safe, responsible, and ethical manner.
