

Solix Technologies Launches Enterprise AI Platform That Transforms Business Data into Trusted Knowledge

SANTA CLARA, CA, UNITED STATES, July 21, 2026 /EINPresswire.com/ -- Solix Technologies, a leader in enterprise data management and Enterprise AI, today announced the launch of its next-generation Solix Enterprise Content Services (ECS) platform. The new AI-native platform transforms fragmented enterprise data and content into a trusted, governed knowledge foundation, enabling organizations to securely activate their information for Enterprise AI.

Empowering the Data-driven Enterprise

As organizations rapidly adopt generative AI, many struggle to deliver meaningful business outcomes because critical information remains fragmented across enterprise applications, databases, file systems, emails, documents, and other business systems. [Solix ECS](#) addresses this challenge by bringing structured and unstructured information together into a single governed platform where employees can ask questions in natural language and receive accurate, explainable, and source-cited answers without writing SQL, manually searching through documents, or waiting for IT to build custom reports.

Unlike AI assistants that operate within a single repository, Solix ECS connects enterprise applications, structured databases, and unstructured content through a unified knowledge layer. A single question can retrieve trusted answers spanning ERP systems, CRM platforms, financial data, contracts, policies, documents, emails, and business records through one governed interface.

Organizations can begin realizing value immediately by securely uploading enterprise documents, spreadsheets, presentations, PDFs, and other business content or by connecting existing enterprise systems. Solix ECS automatically transforms this information into an AI-ready knowledge foundation, enabling users to interact with enterprise information conversationally within minutes.

New users can experience the platform through a free trial, allowing organizations to explore AI-powered content intelligence, natural language search, and trusted enterprise knowledge without a lengthy implementation or proof of concept.

"Every enterprise is sitting on decades of valuable information, but most AI systems cannot access it in a trusted way," said Sai Gundavelli, Founder and CEO of Solix Technologies. "Solix ECS changes that by transforming enterprise data into a governed knowledge foundation for AI. Employees can ask questions in natural language and receive accurate, explainable answers backed by their organization's own information. We believe this is the future of Enterprise AI." Transforming Enterprise Data into Trusted AI Knowledge. The latest Solix ECS release introduces a modern AI-first experience designed to accelerate Enterprise AI adoption.

Key innovations include:

Embedded Solix GPT providing conversational AI across enterprise information

AI-powered content intelligence that classifies, enriches, summarizes, and connects enterprise content

Natural language search with grounded responses and source citations

Industry-specific workspaces designed for finance, healthcare, manufacturing, government, legal, and other regulated industries

Guided onboarding that accelerates time to value for new users

Automatic multi-language localization supporting global organizations

Context-aware AI experiences that respect enterprise permissions and security policies

AI Across the Enterprise

Solix ECS enables every business function to interact with enterprise information through a single governed interface.

Finance teams can analyze AR aging, AP exposure, bookings versus shipped revenue, supplier spend, and period-end close diagnostics. Sales organizations can identify top customers by revenue, review account history, evaluate regional sales pipelines, and correlate customer interactions with enterprise content. Supply chain teams can monitor inventory turns, stockout exposure, supplier performance, and procure-to-pay analytics. Human Resources can examine headcount, span of control, position management, and compensation trends. Compliance and audit teams can instantly query contracts, policies, procedures, and governed records with complete source citations.

Instead of navigating multiple applications, dashboards, and document repositories, employees simply ask questions and receive trusted answers grounded in the organization's enterprise knowledge.

Built for Trusted Enterprise AI

Solix ECS provides the foundation organizations need to operationalize Enterprise AI by:

Making structured and unstructured enterprise data AI-ready

Delivering grounded AI responses with verifiable source citations

Connecting enterprise applications, databases, and content through a unified knowledge layer

Providing secure, role-based access with enterprise governance

Supporting enterprise-scale compliance, retention, and information lifecycle management

As Enterprise AI moves from experimentation to production, organizations require AI platforms that combine security, governance, and trusted enterprise knowledge. Solix ECS delivers that foundation, enabling businesses to unlock the full value of their enterprise information while maintaining the controls required for mission-critical operations.

Availability

The new [Solix Enterprise Content Services platform](#) is available immediately.

Organizations can start a free trial, securely upload enterprise documents and data, connect existing enterprise systems, and begin asking questions in natural language within minutes. The platform enables users to experience AI-powered enterprise knowledge with grounded, source-cited answers across structured and unstructured information.
