

Robertson-Williams Transport and Energy Transport Solutions Select Gravitate TMS

Sister companies serving the Midwest fuel transport market select Gravitate TMS to unify dispatch, payroll, & customer integrations across their carrier fleet.

PLEASANT VALLEY, MO, UNITED STATES, July 21, 2026

/EINPresswire.com/ -- Gravitate, the AI-native fuel supply chain software company, today announced that Robertson-Williams Transport (RWT) and Energy Transport Solutions (ETS), sister companies under common ownership headquartered in the Kansas City metro area, have selected

Robertson-Williams Transport

[Gravitate TMS](#) to replace their previous transportation management system. Founded in 1969, RWT has provided fuel transport services to gas stations, truck stops, municipalities, bulk plants, fuel terminals, airports, and aviation customers across Missouri, Kansas, Iowa, and Illinois, with

ETS operating alongside it as a separate carrier under common ownership. Together, the companies operate a combined fleet of common carrier trucks moving gasoline, diesel, propane, and other refined fuels throughout the region.

“

We needed a system that could scale with us without forcing us to add headcount every time we grow.

Gravitate gives us the tools to manage a complex, multi-state operation from a single platform.”

Chris VanMeerhaeghe, VP & COO, Robertson-Williams Transport

RWT and ETS operate as common carriers, a business model built entirely around moving fuel for other companies' accounts rather than managing owned retail sites. That model depends on dispatch software that can keep pace with a complex, multi-hub operation spanning several states, along with driver pay structures built around multiple mileage tiers and load-based commissions.

Gravitate TMS replaces that patchwork with a single, unified platform purpose-built for fuel

carriers. The system's AI order engine and auto-dispatch optimizer help dispatchers build and adjust loads efficiently across a multi-hub network, while a driver in-cab application replaces paper bills of lading with AI-powered image capture and automatically feeds completed load data back to dispatch, freight billing, and driver payroll. Configurable driver pay profiles accommodate RWT and ETS's tiered, mileage-based commission structure, and freight invoicing tools automate rate calculations, surcharges, and accessorials that were previously tracked by hand.

Energy Transport Solutions

"We needed a system that could scale with us without forcing us to add headcount every time we grow. Gravitare gives us the tools to manage a complex, multi-state operation from a single platform."

Chris VanMeerhaeghe, Vice President & Chief Operations Officer, Robertson-Williams Transport

Gravitare's [Crossroads](#) integration framework also gives RWT and ETS a more direct connection to the retail and wholesale fuel customers they serve. Crossroads already links Gravitare to many of the largest names in fuel retail including Casey's, Kwik Trip, Love's, Maverik, and Marathon. As more of RWT and ETS's customers adopt Gravitare on the retail side, those relationships plug directly into the existing Crossroads framework, extending the same real-time order, supply, and billing visibility that Gravitare's carrier and retail customers already rely on.

"RWT and ETS run a sophisticated, multi-hub common carrier operation, and their driver pay structure alone reflects a level of complexity that most general dispatch tools simply are not built for. Gravitare TMS was designed for exactly this kind of fuel carrier, and we are proud to support their growth across Missouri, Kansas, Iowa, and Illinois."

Mike Scharf, Founder and CEO, Gravitare

About Gravitare

Gravitare is the AI-native fuel supply chain software company, providing an integrated platform for retail and wholesale fuel operators and the common carriers that serve them. Gravitare TMS is purpose-built for [petroleum transport carriers](#), combining AI-powered demand forecasting, auto-dispatch, freight billing, and driver payroll with real-time integrations to customers through Gravitare's Crossroads framework.
