

Perry Lieber Announces Expansion of Construction Consulting Services Across Southern California

SANTA BARBARA, CA, UNITED STATES, August 10, 2026 /EINPresswire.com/ -- Perry Lieber, a construction contracting consultant and construction manager based in Santa Barbara, California, has announced an expansion of his consulting services to reach a broader portion of Southern California. The move extends his operational footprint beyond his established Santa Barbara base to include additional counties and project markets throughout the region.

Lieber has built his practice around providing construction management and contracting consultation for residential and commercial projects along the California coast. His existing work, documented in part through perryliebersantabarbara.com, has focused primarily on projects in and around Santa Barbara County. The newly announced expansion formally extends that scope southward and along adjacent coastal and inland corridors.

The expanded service area includes Ventura County as a primary growth market. Lieber has established a regional presence there, detailed through perrylieberventura.com, with the intent to serve project owners, developers, and general contractors who require outside consulting support on project planning, contractor coordination, and budget oversight.

In terms of project types, the expansion covers single-family residential construction, multi-unit residential development, and light commercial builds. Lieber stated that a significant portion of the anticipated work involves owner-managed projects where clients are navigating contractor selection, scheduling, and cost control without an internal construction management team.

"A lot of property owners and smaller developers in this region are managing projects on their own without much background in how construction timelines or contracts actually work," Lieber said. "There's consistent demand for someone who can step in on a consulting basis and help them work through the process — not as a contractor, but as an advisor who understands how the industry operates."

The expansion also targets projects currently in the pre-construction planning phase, including new builds and major renovations where early-stage consulting can affect downstream outcomes on cost and schedule. Lieber noted that Ventura County has seen increased residential construction activity in recent years, which contributed to the decision to formalize a presence there.

From an operational standpoint, the expansion does not involve opening a physical satellite office but instead relies on regional project visits and remote advisory work supported by Lieber's existing team and professional network in Southern California.

Lieber indicated that additional regions in Southern California could be incorporated into the service area over the following 12 to 24 months, depending on project volume and demand patterns. No specific geographic boundaries beyond Ventura County have been announced at this time.

The expansion takes effect immediately, with new client engagements in the extended service area already underway as of mid-2026.
