Oxide AI Enters New Growth Phase as Its Hybrid AI Reaches More High-Stakes Decisions across Global Enterprises

Oxide AI launches a new generation of Polychaos, its Hybrid AI platform for high-stakes decisions in finance, where LLM-first AI has gained little ground.

MALMö, SKåNE, SWEDEN, September 22, 2026 /EINPresswire.com/ -- Oxide AI is entering a new phase of growth, powered by a new generation of its proprietary Hybrid AI platform, Polychaos, launching today. It is built to solve complex problems and automate high-stakes decisions in highly competitive business environments. According to a16z, AI startups earn $3 billion a year from coding and merely $50 million from financial and investment analysis. Finance is where Oxide AI is already delivering to the most demanding institutions, even in regulated use cases such as credit risk modeling.

> “Many enterprises rent the same general AI as their peers, trained on the same data. We instead deploy a private AI system that specializes around each customer's problem in days and extends their edge”
>
> *Anders Tylman-Mikiewicz*

Delivering Impact Across The Largest Sectors In The World

Oxide AI’s unique offering is now producing commercial results in risk and financial analysis:

- Credit Risk Modeling. Oxide AI works with banks where it delivers material bottom-line impact through better credit decisions and faster time-to-market for new credit risk models that meet regulatory requirements. This high-value use case is now being readied to scale with a global partner.

- Risk Intelligence. Oxide AI has entered a multi-year partnership with a leading Nordic risk data company that has acquired Oxide AI’s Redox system to build its own risk intelligence offering in the KYC and AML space.

- Retail Investing. Oxide AI has co-developed a world-first capability for retail investors: plain language stock-screening questions answered with near-real-time analysis across every US listed company. Built in partnership with a leading retail investor platform.

Oxide AI's Chief Product Officer Kateryna Wikström said, "This release is a big leap forward. We've focused squarely on the finance domains driving our traction, where a standalone large language model (LLM) or agentic approach simply can't compete. The fastest way for customers to see it is to run our hybrid AI as a challenger against their current solution, head-to-head. That's exactly why demand is accelerating"

Scaling Through A Growth Model Built For The Pace Of AI

Oxide AI's go-to-market model is to prove a repeatable high-value use case through a direct relationship, then scale it together with leading sector partners, and repeat.

"AI is moving faster than any technology in history, and the value will accrue to whoever drives it hardest. So, we invest most of our resources into developing our technology and instead scale through strategic partners with a global footprint and strong customer relationships. That's how we make real impact in the world without giving up the edge that our AI platform creates for our customers and us," said Anders Tylman-Mikiewicz, CEO of Oxide AI.

An AI Architecture Built to Win. Now a Generation Ahead

"The success of generative AI was never about the model alone. The value comes from the surrounding technology stack that does the real work. Oxide AI has taken this hybrid approach since day one, and our new generation pushes it much further, using large-scale code synthesis to deliver unique value for each customer in fully isolated environments. Almost every high-value problem in finance comes down to advanced quantitative optimization, and that demands a very different kind of stack than an LLM alone can provide," said Lars Hård, Chief AI Officer of Oxide AI. “When you need to explore many millions of possible solutions to find the best one, an LLM alone just isn't the right tool," he added.

With this new generation, Oxide AI is extending its lead in the decisions that matter most, where keeping AI private and sovereign is table stakes and finding the edge is everything.

About Oxide AI

Oxide AI is a frontier AI lab, headquartered in Malmö, Sweden, building Hybrid AI for the world's highest-stakes decisions, where complex problems have outgrown human capacity, where experts are too scarce, and where language-first AI falls short. While Oxide AI’s AI technology is applicable across domains, the company focuses on enterprise solutions for finance through direct relationships and strategic partnerships.

Founded in 2020 by a team with two decades of putting AI into production at global scale across some of the world's largest enterprises, Oxide AI spent five years developing a proprietary architecture that specializes around each customer's business, learns continuously after

deployment, and produces fully explainable that meet regulatory requirements. Patent pending.
