

Buckets with Lids Wholesale Supplier: Stable Export Supply for Distributors

NANJING, TIANJIN, CHINA, July 29, 2026 /EINPresswire.com/ -- For international distributors, the value of a reliable [Buckets With Lids Wholesale Supplier](#) is measured less by a single spot purchase than by supply that repeats: consistent sizing, dependable sealing, batch-level quality, and export fulfillment that arrives on schedule. [UMETASS](#), the export brand of Nanjing Shuishan Technology Co., Ltd., approaches lidded buckets on exactly those terms. Founded in 2005, the manufacturer develops, produces, and sells plastic container products, with a bucket range that spans 0.5L to 50L and a company philosophy, Exquisite Feelings, Shuishan Manufacturing, that ties sealing performance to long-term service. Food, chemical, resin, and household-goods packaging all share the same demand for secure closures and a steady delivery rhythm, which is what makes stable supply a working condition for distribution rather than a one-time transaction.

Buckets With Lids Wholesale Supply Starts with a Usable Product Range

The LK series covers the sizes distributors actually move. Fifteen capacities, from 0.5L up to 50L, address samples, small retail packs, and larger storage and transport formats within one manufacturing system, so a buyer is not forced to source across several vendors to complete an assortment. Each bucket is made from FDA-grade polypropylene and ships with a matching lid, giving food, chemical, agricultural feed, and industrial hardware customers a clear basis for choosing capacity and closure. The available volumes run 0.5L, 1L, 2L, 3L, 4L, 5L, 6L, 10L, 15L,

18L, 20L, 25L, 30L, 35L, and 50L. Wholesale supply, in practice, is not about stocking a single popular size; it is about letting different end-use scenarios draw from a continuous, food-safe range.

Lid and Handle Configurations Protect Distribution Flexibility

A lid is not just an accessory; it is the interface between transport, warehousing, and end use. UMETASS offers tear-tab, pour-spout, breathable, gamma-seal, and screw-top lids, so sealing, pouring, venting, and repeat-open requirements can be matched to the product a distributor is packing. The standard tear-tab lid closes tightly and shows first-open evidence, which reassures the buyer downstream. Handles follow the same logic: LK buckets can be fitted with plastic or metal handles, and every size except the 50L carries a handle option for easier lifting. Because closures and grips are configured to the packaging job rather than sold as a fixed bundle, a distributor can align each product code with how the container will be filled, shipped, stacked, and reopened in the field.

Manufacturing Scale Turns Wholesale Orders into Repeatable Supply

Repeatable supply rests on capacity. Nanjing Shuishan Technology Co., Ltd. reports annual output of roughly 50 million pieces and daily output near 100 thousand pieces, supported by its own mold workshop. Those figures matter to wholesale buyers because they turn a single purchase order into a production and replenishment rhythm that can be scheduled rather than hoped for. The company runs both injection and blow molding equipment and supports OEM design, so size extensions, custom projects, and routine reorders move through the same system. Since 2005 it has held more than 100 patents while developing, producing, and selling plastic containers. The point is not an abstract capacity number; it is that new specifications and standard orders connect inside one operation, which is what keeps a distributor shelf consistently filled.

Quality Control Keeps Lidded Buckets Ready for Export Handling

Export handling is where weak buckets fail. UMETASS applies a seven-step quality-control routine to the LK series that checks lid sealing, leak resistance, tilt stability, drop performance, stacking, appearance, and material purity, so lidded buckets hold a consistent standard from warehouse stacking through transit vibration to arrival inspection. Among these, a 24-hour side-lying leak test, a one-meter drop test, and a four-high stacking check held for 30 days map directly to sealing reliability, impact resistance, and long-term stacking behavior. Impurity control limits each bucket to no more than three tiny specks, each under 2 mm. Batch inspection turns product requirements into shipping conditions a distributor can count on, which is exactly what an importer wants confirmed before a container leaves the plant.

Export Terms and Order Flow Support Distributor Replenishment

For international orders, UMETASS ships by courier, air freight, and sea freight, and works under EXW, FOB, CIF, and DDP trade terms, so delivery is shaped by stock, logistics choice, and customs handling rather than freight cost alone. Common sizes held in stock generally ship within a week, while larger volumes or custom production runs take roughly one to two weeks, and standard samples are available at no charge for evaluation. The order flow, from requirement discussion and sample approval through production, inspection, packing, and dispatch, runs as one service sequence. That gives a distributor clear, communicable checkpoints for replenishment, so reorders can be planned against known lead times instead of guesswork.

Customization Keeps Distributor Assortments Relevant to Local Markets

Local markets reward the right look, not just the right size. UMETASS folds container color, printing, and labeling into its lidded-bucket supply, offering silk screen printing, heat transfer printing, in-mold labeling, and applied adhesive labels to carry different brand identities and packaging information. Silk screen printing runs up to two colors, and color can be matched to Pantone or standard references. Its own mold workshop and OEM design support give new sizes or branded projects a clear development path. Bulk supply should do more than repeat one appearance; when capacity, color, decoration, and lid choice combine into a sellable set, a distributor can keep an assortment relevant to regional retail and industrial customers instead of offering a single generic bucket.

A Stable Base for Wholesale Buyers

With a 0.5L to 50L range of buckets with lids, multiple closure and handle configurations, manufacturing scale near 50 million pieces a year, a seven-step quality-control routine, and international trade and logistics support, UMETASS assembles the pieces distributors need for stable export supply. The brand promise, Exquisite Feelings, Shuishan Manufacturing, frames that offer: precise sealing, disciplined production, and continuous service behind a long-term plastic packaging partnership. Distributors, importers, and brand owners evaluating a wholesale buckets with lids supplier can review the full LK series, closure options, and export program to plan their next reorder.
