

SNC Featured in Documentary Series Showcasing Its Open Architecture Leadership and Digital Engineering Innovation

Showcases how SNC's 60-year heritage and engineering discipline are shaping the future defense economy

SPARKS, NV, UNITED STATES, August 3, 2026 /EINPresswire.com/ -- [SNC](#), the global aerospace and national security company, is the focus of an upcoming short-form documentary, "In Defense of Tomorrow." The film explores how SNC is reshaping America's defense industrial base through open architecture, digital engineering and an innovation model designed for the speed and complexity of the modern threat environment.

For decades, major defense systems were developed through rigid, closed architectures designed for a slower, more predictable era. Today's world requires something different. As described in the documentary, "the world is evolving faster than the systems originally designed to protect it," underscoring the growing need for rapid innovation, adaptable platforms and engineering built for continuous and fast change.

The film takes viewers inside SNC's transformation from a small Nevada-based company into one of the defense industry's most forward-leaning problem solvers. Built on a mission-focused foundation, SNC's leaders cultivated a culture defined by ingenuity, openness and the drive to challenge convention, values that continue to define the company's national security mission today.

At the core of SNC's impact is its long-standing commitment to open architecture solutions, a major theme throughout the documentary. The film showcases how traditional vendor-locked systems can slow integration, limit adaptability and increase long-term costs. SNC breaks that paradigm by designing systems that are flexible and built to integrate new technologies rapidly. The documentary also highlights how SNC invests early and often ahead of customer demand to ensure it delivers capabilities at the speed mission needs require. This proactive approach allows SNC to shorten development cycles, reduce risk and provide greater long-term value to its partners.

Viewers also gain a behind-the-scenes look at SNC's pioneering work in digital engineering, including the use of advanced modeling, digital twins and fully integrated end-to-end digital threads that allow engineers to design, test and validate complex aircraft modifications virtually

before executing them physically. "In the new world, to be able to move at the speed we need to, we have to have agile development systems where we're able to iterate quickly and deliver solutions at a much faster rate," VP of Engineering Chet Thorne explains. "As we get more into the AI realm, we see the threats are changing faster than we can change the actual design. Model-based and open architecture allows us to start changing at the pace the customer needs."

The short-film culminates with SNC's role in several of the nation's most critical modernization programs, demonstrating that open architecture solutions, shared data rights and digital engineering are not just technological choices, they are strategic necessities for national security. Through these programs, SNC continues to advance next-generation readiness and strengthen the technological foundations that protect the nation.

The project presents SNC as a model for the future of defense innovation: adaptable, digitally enabled and built to meet evolving national security needs to safeguard freedom.

About SNC

SNC is a trusted global leader in aerospace and national security. Our innovative solutions enable connected protection through command, control and communications systems, as well as ISR, cyber, electromagnetic spectrum management, and other high capabilities for national security systems across all domains – sea, land, air, space and cyber. As a longstanding leader in defense technology, SNC is at the optimum intersection of commercial, defense and non-traditional contractors. We are one of the only privately owned mid-tier A&D contractors and we pride ourselves on our ability to invest early and often to ensure mission success on or ahead of schedule. It's part of our mission to always stay one step ahead; working on solutions today to solve the problems of tomorrow. Founded in 1963, SNC is owned by Chairwoman Eren Ozmen and CEO Fatih Ozmen.
