

Spectacle Hut Launched Transitions® Color Touch™ Lens Range on 21 July 2026

Spectacle Hut launched the Transitions® Color Touch™ lens range in Singapore on 21 July 2026.

SINGAPORE, SINGAPORE, August 11, 2026 /EINPresswire.com/ -- Singapore — Spectacle Hut launched the Transitions® Color Touch™ lens range in Singapore on 21 July 2026, according to information provided by the company. The new range added a colour-focused option to its prescription lens offering.

The launch came as more eyewear users compared different vision solutions, from [contact lens](#) options to prescription [optical lenses](#) and connected eyewear such as [AI glasses](#). Transitions® Color Touch™ sat within the prescription lens category and introduced an always-on touch of colour for everyday eyewear.

“

Transitions® Color Touch™ combines soft indoor tints with outdoor activation, giving wearers a prescription lens that changes with the light while retaining a visible touch of colour.”

EssilorLuxottica

The range was built on Transitions® GEN S™ technology, a light-adaptive lens platform designed to respond to changing light conditions. Transitions® Color Touch™ combined soft indoor tints with outdoor activation, allowing the lenses to change appearance depending on lighting conditions.

About Transitions® Color Touch™

Transitions® Color Touch™ is a new lens range from Transitions®, an EssilorLuxottica brand. It was introduced

globally in 2026 and has already begun rolling out in selected regions.

LENTES ULTRA DINÂMICAS
COM UM TOQUE DE COR
SEMPRE ATIVO

2 efeitos : Washed & Gradient
5 cores

The range features two effects: Gradient and Washed. It is available in five shades: Ruby, Amber, Sapphire, Amethyst, and Emerald. These colour options are designed to give wearers more choice when selecting prescription eyewear.

Unlike standard clear-to-dark photochromic lenses, Transitions® Color Touch™ has a visible colour effect even indoors. Outdoors, the lenses activate further when exposed to changing light conditions.

Built on Transitions® GEN S™

Transitions® Color Touch™ is built on the Transitions® GEN S™ lens platform. GEN S™ lenses are described by Transitions® as ultra-responsive to light. They are designed to darken outdoors and fade back indoors, depending on light exposure, lens material, colour, and temperature.

This base technology is important because Color Touch™ is not only a style-led lens range. It is also part of the wider Transitions® category of light-adaptive lenses.

As with other photochromic lenses, performance may vary depending on lens material, colour, temperature, and UV exposure. Transitions® also notes that Color Touch™ lenses may not be suitable for low-light conditions or for driving at twilight or at night.

Two Effects and Five Colour Options

The Transitions® Color Touch™ range gives customers a choice between two visual effects.

Gradient offers a colour effect that changes across the lens.
Washed offers a softer tint across the lens.

The five available shades are:

Ruby. A red-toned shade designed to add warmth to the lens appearance.

Amber. A golden-brown shade with a softer visual effect.

Sapphire. A blue-toned shade for a cooler lens appearance.

Amethyst. A violet-inspired shade with a subtle colour finish.

Emerald. A green-toned shade for wearers who prefer a fresh colour option.

These shades can be paired with different frame styles, depending on the wearer's prescription, visual needs, and personal preference.

A Lens Option for Everyday Prescription Eyewear

The launch of Transitions® Color Touch™ gave Spectacle Hut customers another option when choosing prescription lenses. It may be considered by wearers who want lenses that adapt to outdoor light while keeping a visible colour effect indoors.

The range also reflected a wider interest in eyewear that balances vision correction, comfort, and appearance. Customers today often consider several types of eyewear based on their lifestyle, including glasses, contact lenses, photochromic lenses, and smart eyewear.

For this reason, Spectacle Hut recommends that customers speak with an eye care professional before choosing a new lens type. Lens suitability may depend on prescription, frame choice, daily habits, and comfort needs.

Availability at Spectacle Hut

Spectacle Hut launched Transitions® Color Touch™ in Singapore on 21 July 2026. Customers can visit Spectacle Hut to learn more about the available shades, lens effects, and suitability for their prescription needs.

The company's eye care professionals can also guide customers through lens options, including Transitions® lenses, and other eyewear solutions available in-store.

About Spectacle Hut

Spectacle Hut is an optical chain retailer in Singapore offering eye care services, eyewear, prescription lens, contact lens consultation and fitting , and AI Glasses from Ray-Ban Meta and Oakley Meta. The company provides professional eye examinations, eyewear guidance, and support from eye care professionals.

With the introduction of Transitions® Color Touch™, Spectacle Hut added another light-adaptive lens option for customers looking for prescription eyewear with a subtle colour element.
