

Elev8 Health Introduces AuthIQ: The Agentic AI Engine Powering the Future of Patient Access

An agentic intelligence layer designed to transform how medical device companies navigate patient access, automate workflows, and scale commercialization.

HOUSTON, TX, UNITED STATES, August 12, 2026 /EINPresswire.com/ -- [Elev8 Health](#) today announced [AuthIQ](#), the extensible agentic AI layer powering the Authentic8 Patient Access Platform. Purpose-built for medical device manufacturers, AuthIQ serves as the intelligence and orchestration layer across Authentic8 coordinating AI-powered workflows, applying dynamic payer intelligence, and enabling the deployment of tailored AI agents designed around specific patient access challenges, technologies, and workflows.

“

We built AuthIQ to transform patient access from a commercialization hurdle into a strategic advantage.”

Jamie Tipton - CEO & Founder

AuthIQ is the extensible agentic AI layer powering the Authentic8 Patient Access Platform.

As patient access grows increasingly complex across commercial and government payers, medical device manufacturers face fragmented workflows, evolving reimbursement requirements, and mounting pressure to accelerate access while reducing administrative burden. AuthIQ brings agentic intelligence directly into these workflows, analyzing requirements, applying evidence backed decision support, and automating complex processes to help patient access teams work faster, more

accurately, and with greater consistency.

Unlike AI solutions built to address a single task or isolated portion of the access process, AuthIQ provides an extensible agentic architecture within Authentic8. Its centralized orchestration layer allows specialized agents to be tailored and deployed to distinct access functions while operating

within a unified patient access environment. This architecture gives medical device manufacturers the ability to address complex access needs today and continuously extend agentic capabilities as new technologies, workflows, and commercialization needs emerge.

“Medical device manufacturers have transformed patient care through innovation, yet patient access has remained largely manual, fragmented, and reactive,” said Jamie Tipton, Founder and CEO of Elev8 Health. “We believe the future of patient access is agentic and that future is here. AuthIQ brings agentic intelligence directly into the patient access operation, while providing an extensible layer through which specialized AI agents can be deployed to address increasingly complex access challenges. It gives medical device companies a new foundation to automate access functions, accelerate product adoption, and scale commercialization.”

Together, Authentic8 and AuthIQ deliver an end-to-end patient access solution built specifically for the medical device industry. Authentic8 provides the streamlined operational framework that connects and manages the patient access journey, while AuthIQ provides the agentic intelligence that powers automation, decision support, and the deployment of specialized AI agents across the platform. Rather than introducing disconnected AI tools for individual tasks, this unified architecture allows new agentic capabilities to be delivered within the same patient access environment as needs evolve.

“Our vision has always been to build the industry’s leading patient access platform,” Tipton added. “Bringing AuthIQ and Authentic8 together moves that vision forward by giving medical device manufacturers a platform that can solve access challenges today and continuously expand what can be automated tomorrow.”

For more information about AuthIQ and the Authentic8 Patient Access Platform, contact Elev8 Health to schedule a demonstration.

About Elev8 Health

Elev8 Health is a healthcare technology company dedicated to transforming patient access for medical device manufacturers. Its Authentic8 Patient Access Platform helps medical device companies accelerate commercialization by streamlining prior authorization, optimizing patient access workflows, and delivering agentic AI capabilities through AuthIQ. By reducing reimbursement barriers and improving operational efficiency, Authentic8 enables market access teams to support providers more effectively while empowering sales organizations to increase product adoption across their customer base and drive stronger commercial performance.
