

IVM Launches Next-Generation SmartStation and SmartLocker Platforms with Enhanced Inventory Analytics

INDIANAPOLIS, IN, UNITED STATES, August 6, 2026 /EINPresswire.com/ -- IVM, Inc., a leading American manufacturer of industrial vending machines and smart locker systems, today announced the launch of its next-generation [SmartStation](#) and [SmartLocker](#) platforms. The expanded product line delivers enhanced inventory tracking, automated distribution, and cloud-based analytics designed to serve enterprise IT departments, manufacturing facilities, healthcare providers, government agencies, educational institutions, and public safety organizations across the United States.

The updated SmartStation industrial vending machine line introduces improved dispensing capabilities for personal protective equipment (PPE), maintenance, repair, and operations (MRO) supplies, and mission-critical inventory. The new PPE vending machine configurations allow facility managers to control access to safety equipment, monitor consumption in real time, and generate compliance reports for occupational safety programs. IVM's industrial vending machines are engineered for high-volume environments including manufacturing plants, distribution centers, oil and gas facilities, and construction sites.

The updated SmartLocker system introduces new form factors purpose-built for a range of enterprise applications. Smart device locker systems provide secure storage and charging for iPads, laptops, and other enterprise IT assets, while evidence locker configurations enable automated chain-of-custody workflows for law enforcement and forensic teams. Automated locker system deployments support 1:1 device distribution in K-12 and higher education,

hotdesking programs in modern workplaces, and after-hours package delivery in mixed-use commercial buildings.

"Facility and operations leaders across every industry are being asked to do more with less — reduce inventory shrink, improve accountability, and eliminate manual processes — all while proving compliance," said Andrew Uzoigwe at IVM. "The next-generation SmartStation and SmartLocker platforms give them the tools to accomplish all three from a single, unified system."

Federal Procurement Availability

All new SmartStation and SmartLocker units remain available to federal customers through IVM's GSA Multiple Award Schedule contract (Contract Number 47QTCA26D0017), with [TAA-compliant](#) configurations manufactured under Buy American and Build America Buy America (BABA) guidelines. IVM's smart locker solutions are also accessible through SEWP V and select state cooperative purchasing agreements, allowing federal, military, state, and local agencies to procure via their preferred contract vehicles.

The company holds a range of compliance certifications relevant to public sector procurement, including CMMC Level 1, ISO 27001, SOC 2, PCI DSS, and Section 508. These credentials support deployments in sensitive government environments including U.S. Department of War installations, federal research laboratories, and law enforcement facilities.

Enterprise Integrations and Analytics

The next-generation platform integrates natively with leading enterprise systems, including major customer relationship management (CRM), inventory management, and IT service management platforms. IVM's automated inventory tracking and reporting engine provides facility managers with granular usage analytics, cost allocation reports, and predictive replenishment alerts. Cloud-based dashboards allow multi-site organizations to monitor smart locker and industrial vending machine deployments across geographies from a single interface.

Customers can also deploy customizable inventory management workflows, secure inventory distribution rules, and integrations with badge readers, common access cards (CAC), and single sign-on (SSO) systems for authenticated access control.

Availability

The next-generation SmartStation and SmartLocker platforms are available for order today. Customers interested in evaluating a deployment can request a consultation or product demonstration by visiting www.ivminc.com or contacting IVM's sales team directly.

About IVM

IVM, Inc. is an American manufacturer of smart inventory management solutions including industrial vending machines, smart lockers, and automated distribution systems. The company's SmartStation and SmartLocker platforms serve enterprise, government, healthcare, education, manufacturing, and public safety customers with secure inventory distribution, automated chain-of-custody, real-time usage tracking, and integrated compliance reporting.
