ClearValue Consulting integrates Restb.ai Complexity Assessment into its Acuity platform

ClearValue integrates Restb.ai's AI-powered Complexity Assessment into Acuity to help lenders and AMCs identify complex properties earlier.

Don Juhl, CEO of ClearValue Consulting.

DALLAS, TX, UNITED STATES, August 3, 2026 /EINPresswire.com/ -- ClearValue Consulting and Restb.ai today announced the integration of Restb.ai's AI-powered Complexity Assessment into ClearValue's Acuity platform, helping mortgage lenders and appraisal management companies identify potentially complex properties earlier in the appraisal process.

The new integration deploys Restb.ai's computer vision and property intelligence to provide objective, property-level insights when an appraisal assignment is created. This helps mortgage lenders and AMCs determine which assignments may require an appraiser with additional experience, specialized knowledge or specific licensing.

"Our clients will be able to improve their workflow efficiency and make more informed appraisal assignment decisions with this new integration of one of the most powerful and proven AI technologies for valuation," said Don Juhl, CEO of ClearValue Consulting. "The ability to identify complex properties earlier gives lenders and AMCs another layer of objective information before an assignment is made."

The integration also gives ClearValue clients structured insights that can support quality control, risk management and more consistent assignment practices. Lenders and AMCs can use the information to evaluate complexity trends across markets, loan programs, clients and geographic regions.

““ClearValue’s integration of computer vision earlier in the appraisal process marks an important step in appraisal modernization while keeping the appraiser at the center of the process,” said Tony Pistilli, president of valuations at Restb.ai. “By identifying the potential complexity of an assignment earlier, lenders and AMCs can select an appraiser with the right experience and expertise from the outset, helping reduce delays and remove friction from the process.”

Tony Pistilli is President, Valuations at Restb.ai.

Restb.ai’s computer vision technology analyzes property photos to identify characteristics and other visual information that can support appraisal and valuation workflows. The company’s solutions are used by lenders, appraisal technology providers, appraisal management companies and other real estate organizations.

About ClearValue Consulting
