

Flashpoint Enhances AI-Driven Threat Intelligence Investigations at Black Hat USA 2026

New customizable AI capabilities help security teams transform investigation findings into standardized, audience-specific intelligence.

LAS VEGAS, BLACK HAT USA 2026 , NV, UNITED STATES, August 3, 2026 /EINPresswire.com/ -- [Flashpoint](#), the global leader in threat intelligence, today announced the launch of its new Custom Summary Builder within the AI Workspace for Investigations Management. Built directly into Flashpoint Ignite, the new capability enables security and intelligence teams to tailor AI-generated investigation findings for different audiences while standardizing intelligence delivery across the enterprise.

Flashpoint's AI Workspace for Investigations Management

Flashpoint Ignite already helps teams synthesize the evidence collected within an investigation into an automatically generated overview. With the Custom Summary Builder, analysts can now select from a library of sections, including Executive Summary, Key Observations, Actors and Entities, Tactics, Techniques, and Procedures (TTPs), Industry Threat Landscape, Recommendations, and more, to create intelligence tailored for different stakeholders. Those configurations can be saved as reusable templates, allowing teams to apply consistent reporting formats across future investigations.

“As organizations operationalize AI in their intelligence operations, they're also looking for ways to extend capabilities across adjacent teams,” said Josh Lefkowitz, Co-Founder and CEO of Flashpoint. “To do that, analysts need the flexibility to adapt intelligence for different audiences, but organizations also need consistency in how that intelligence is communicated. Bringing those two requirements together is what allows AI to become part of an operational workflow

rather than a point solution."

A COMPREHENSIVE WORKSPACE FOR END-TO-END INVESTIGATIONS

The custom templates expand the core capabilities of Flashpoint's AI Workspace for Investigations Management, an interactive environment that helps analysts collect evidence, synthesize findings, collaborate, and communicate intelligence from a single workspace.

Key capabilities include:

- Multi-Source Data Aggregation: Bring together Flashpoint intelligence, including compromised credentials, vulnerability data, intelligence reports, and illicit community activity, alongside private user-uploaded files such as PDFs, documents, images, and text.
- AI-Assisted Investigation Analysis: Automatically synthesize the information collected during an investigation into structured sections, including an overview, key observations, detailed analysis, actors and entities, TTPs, and notable data points. The generated content adapts to the type and volume of available evidence.
- Fully Sourced, Auditable Output: Trace generated findings back to the underlying Ignite data, including community posts, credentials, malware analysis, and finished intelligence, helping analysts review and validate supporting evidence.
- AI Chat for Follow-Up: Ask questions about the investigation corpus, including actor motivations, relationships among TTPs, and potential risk correlations, without leaving the workspace.
- Flexible Delivery: Copy completed content or download it as a PDF, making it easier to move intelligence into established reporting and stakeholder communication workflows.
- Organization-Wide Standardization: Keep templates private or share them across the organization to enable teams to establish consistent formats for executive briefings, SOC handoffs, incident updates, and customer communications.

By combining investigation management, AI-assisted analysis, and customizable deliverables in a single environment, Flashpoint helps analysts spend less time restructuring content and more time evaluating threats and supporting decision-making.

Availability:

Custom summary templates are available now to Flashpoint Ignite customers with access to Investigations Management.

MEET FLASHPOINT AT BLACK HAT USA 2026

Flashpoint invites attendees to schedule time with its team on-site at Black Hat USA 2026 for a closer look at Investigations Management AI Workspace. To book a meeting, please visit

FREQUENTLY ASKED QUESTIONS

What is Flashpoint announcing at Black Hat USA 2026?

Flashpoint is announcing new AI-driven workflow enhancements to the Ignite platform, led by expanded customization within the AI Workspace for Investigations Management. The new Custom Summary Builder enables security teams to adapt AI-generated investigation content for different audiences and establish repeatable reporting formats across the organization.

ABOUT FLASHPOINT

Flashpoint is the leader and largest private provider of threat data and intelligence. We empower mission-critical businesses and governments worldwide to decisively confront complex security challenges, reduce risk, and improve operational resilience amid fast-evolving threats. Powered by Flashpoint Primary Source Collection, our proprietary approach to collecting intelligence directly from the digital spaces where threats originate, the Flashpoint Ignite platform delivers unmatched depth, speed, and relevance from open and hard-to-reach sources, enriched by human expertise and scaled by AI. Our solutions span cyber threat intelligence, vulnerability intelligence, geopolitical risk, physical security, fraud, and brand protection. The result: our customers safeguard critical assets, avoid financial loss, and protect lives. Discover more at flashpoint.io.
