

PEL Learning Centers on Building Back to School Routines

PEL Learning Centers helps students build confidence, stronger study habits, and academic skills through personalized after-school tutoring and coaching.

HAYWARD, CA, UNITED STATES, August 4, 2026 /EINPresswire.com/ -- As the Back to school season approaches, PEL Learning Centers is highlighting the role that structured after-school support can play in helping students return to class with stronger routines and clearer academic habits. The [California-based organization](#), founded in 2013 by Katherine Low and Han Fung, says it now operates 12+ locations across California and has served more than 10,000 students through its personalized learning model. On its website, the company describes its programs as a combination of academic instruction, coaching, and character development intended to help children build confidence and independent learning skills.

PEL Learning Centers says its core services include math instruction, [English Language Arts](#), private tutoring, homework help, and seasonal workshops. The organization also offers free academic assessments and individualized learning plans, which it uses to align support with a student's current level and learning pace. On the company's website, the PEL Method is described as a process that includes concept introduction, guided coaching, scaffolding and fading, and articulation, with the goal of helping students move from guided

PEL Learning Centers-

Structured After-School Support

practice to independent performance. The organization says this structure is designed to support mastery rather than short-term task completion.

The company has also published seasonal guidance on its website for families preparing for the new school year, including a page titled “School is Back in Session, Enroll Now!” In that material, PEL Learning Centers says its after-school services are intended to help students learn, grow, and succeed during the Back to school season. The organization also states that its instructors teach new skills and provide additional help where needed, with an emphasis on helping students understand schoolwork more clearly rather than simply finishing assignments.

PEL’s math program follows Singapore-style instruction, which the organization says is built around conceptual understanding, step-by-step learning, and mastery before moving forward. Its English Language Arts curriculum is described as customized for students from Pre-K through high school and based on The Spalding Writing Road to Reading method, with instruction in phonograms, reading, and writing. On the website, the company says these academic programs are intended to reinforce school learning while also building long-term skills such as critical thinking, self-confidence, and independent study habits.

A PEL Learning Centers representative said the organization views the Back to school period as a practical moment for families to revisit learning routines and academic support. “Our view is that this season is not only about supplies and schedules,” the representative said. “It is also a time when students benefit from structure, consistent practice, and encouragement that helps them rebuild confidence.” The representative added that PEL’s approach is focused on helping children strengthen core skills in a setting where they can receive guided support and then practice those skills independently. These comments reflect the organization’s stated philosophy that learning should support both academic performance and long-term self-reliance.

Learn. Grow. Succeed

Stronger Skills, Higher Confidence

The organization's website also outlines what a typical learning-center routine looks like. Students check in, exchange homework, correct errors in class, complete classwork with available guidance, and check out with an instructor or coach. PEL says it monitors progress carefully and adjusts the amount of support and practice based on student needs. The company also states that families can schedule a free assessment before enrolling, which helps identify the student's current level and shape the learning plan that follows.

In the organization's view, the strongest educational gains come from consistency rather than quick fixes. PEL Learning Centers says its model is designed to help children strengthen foundational understanding, improve study habits, and gain the confidence needed to handle classroom demands with less stress. The company's website also references a 90-day performance guarantee at participating centers, though it notes that the offer is subject to participation terms and has no cash value.

About PEL Learning Centers: PEL Learning Centers is a California education company founded in 2013 by Katherine Low and Han Fung. The organization offers math, English Language Arts, private tutoring, homework help, and [summer workshops](#) through individualized instruction and coaching-based learning support. Its website says the company's broader goal is to help students develop independent learning habits, confidence, and character alongside academic progress.
