

Reclaim Digital Privacy: Glacier Launches Full Coverage Phone App To Help Consumers Feel Secure Again

Your Phone Has Been Spying on You: New App Launches to End Data Tracking, Unwanted Ads and Offers Disposable Phone Numbers

FRANKLIN, TN, UNITED STATES, August 6, 2026 /EINPresswire.com/ -- Somewhere along the way, "accept all cookies" became a risky lifestyle. Every text. Every search. Every shopping trip. Every game your child downloads. Every coupon you click. Every app you open. Behind many of those everyday moments, companies collect data to personalize experiences, measure behavior and deliver advertising. We've all had an advertisement pop up on our phone for an item we had just been talking about — while sometimes it's easier to believe it's just a coincidence, the truth is frightening and it's time to take action.

Today, Security App LLC says enough by introducing [Glacier App](#), a privacy platform designed to help individuals and families take back control of their digital lives. Built by the cybersecurity professionals who have spent more than a decade protecting governments, enterprises and high-profile individuals from sophisticated cyber threats, Glacier App helps ensure your device hasn't been tampered with or exposed to hidden threats. Bringing advanced privacy technology to consumers through a simple app that works quietly in the background — no cybersecurity expertise required — Glacier prevents your device from connecting to known trackers, ad networks, and data-collection services. Together, these small blocks work to reduce cross-app tracking, limit profiling and stop apps and websites from sending your data to third parties.

"As a father, everything I do is to create a better world for my kids to live in," said [Shawn Ryan](#),

Full Coverage Protection App

Co-Founder, Glacier App, and host of The Shawn Ryan Show. "We believe Glacier app is one step closer to giving future generations the privacy they deserve. We don't believe consumers should have to choose between convenience and privacy, which is why we built this platform to deliver both."

Glacier App was designed to provide a more comprehensive approach through:

Protecting phone calls with security, privacy and limited burner phone #s

Reducing unnecessary online tracking across websites and applications

Identifying potentially malicious network activity before it reaches users' devices

Proving greater visibility and control over their digital footprint

Operating automatically in the background without browser extensions or complex configuration

Making advanced privacy [protection](#) accessible for individuals and families, regardless of technical expertise

Social media advertising drives impulse purchases for 81% of consumers, with targeted ads achieving a 9x higher click-through rate than non-targeted ads. As consumers spend more time online, the volume of personal data collected by websites, applications and third-party advertisers continues to grow — and most consumers have little visibility into how much information is collected, or where it goes next. Glacier App takes a more comprehensive approach than private browsing modes or virtual private networks (VPNs) by helping reduce unnecessary tracking, identifying potentially malicious network activity and providing users with greater visibility and control over what information leaves and reaches their devices.

The Next Generation of Digital Privacy

Built to provide a more comprehensive approach to digital privacy, Glacier App gives users greater visibility and control over their digital footprint without changing how they use their devices. That simplicity makes it equally well-suited for families, giving parents an easy way to add another layer of privacy protection to their children's devices without adding complexity.

"Glacier App was built around a simple question ... what if protecting your privacy didn't require changing the way you use your phone?" said Alex White, Co-Founder and Chief Technology Officer at Glacier Security. "We've spent years protecting organizations and individuals facing some of the world's most sophisticated cyber threats, now we're making that experience accessible through a product that's simple for everyone to use."

Ryan and White joined forces to create Security App LLC. Serving Fortune 500 companies, the government, nonprofits, and high-net worth individuals, Glacier App has already accumulated thousands of people joining their waitlist ahead of the app's public launch. Glacier App is now available to download in the Apple Store.
