

Aiarty Image Enhancer v3.13 Updates Face Restoration and Streamlines Photo Editing Workflows

Aiarty Image Enhancer v3.13 expands AI Face Restoration with finer controls and introduces workflow improvements for more efficient photo quality enhancement.

CHENGDU, CHINA, August 6, 2026 /EINPresswire.com/ -- Aiarty, the AI-focused brand of Digiarty Software, announced the release of [Aiarty Image Enhancer](#) v3.13, introducing significant updates to AI Face Restoration alongside workflow improvements for photographers, content creators, designers, and home users.

Aiarty Image Enhancer is desktop software that uses deep-learning models to improve image quality with natural details. It helps reduce image noise, fix softness, enhance RAW images, upscale images up to 4K, 8K, and 32K, refine colors, remove unwanted objects, and restore details in skin, fabrics, and organic surfaces.

The latest release focuses on giving users [greater control over face enhancement](#), with improved Face Restoration models, while making post-processing more efficient, whether using Aiarty as standalone software or integrating it into existing photo editing workflows.

What's New in Aiarty Image Enhancer v3.13

- **Strength Control in Face Restoration:** Fine-tune the restoration intensity to achieve the right balance between enhanced skin quality and natural facial texture.
- **Updated Blend Modes in Face Restoration:** Better suited for different portrait conditions.
- **Manual Face Selection:** Select or deselect detected faces flexibly.
- **2-Pass Face Restoration:** Add a second processing pass for additional facial details.
- **Automatic Lightroom External Editor Setup:** Aiarty automatically configures itself as a Lightroom External Editor upon launch for smoother editing workflows.

- Export to Original Folder: Save enhanced images to the same source path.

Best Practices with the Updated Face Restoration in Aiarty

Aiarty Image Enhancer includes standard AI models that improve image quality for a wide range of scenarios. In most cases, the More-detail GAN, AIGCsmooth, and Real-Photo models are sufficient to produce natural, high-quality results without Face Restoration.

When users need face enhancement for degraded portraits and old photos, they can enable Face Restoration, preview the enhanced results, and [follow the best practices](#) to easily adjust the settings for the best fit.

1) Choose the Suitable Face Restoration Model and Blend Mode

For Face Restoration model, start with the default Fidelity option that prioritizes faithful enhancement for photos in most cases. Switch to the Rebuild option when generative reconstruction is needed.

The updated Blend Modes further optimize restoration for different portrait conditions.

- For blurrier, lower-resolution faces, Gradient Overlay showcases the model's reconstruction capabilities.
- Alpha Overlay is better suited to clearer faces with more defined contours and helps preserve the original colors.

2) Adjust Face Restoration Enhancement Strength

With the real-time previewer, it's handy to examine the enhanced photo quality, and adjust the Face Restoration strength accordingly. Higher values provide stronger facial enhancement, while lower values help retain more of the original facial texture.

The new 2-Pass Face Restoration option can further improve facial details in challenging portraits.

3) Flexibly Select or Deselect Some Faces in Group Photos

Face Restoration can now be enabled or disabled for each detected face, giving users greater control over portrait enhancement.

For example, in group photos, people farther from the camera often appear naturally softer because of distance and depth of field. Rather than restoring every detected face, users can simply deselect faces that do not require enhancement, helping preserve the intended depth and natural appearance of the image.

Seamless Photo Editing Workflows in Aiarty

Version 3.13 also streamlines photo editing workflows. Aiarty now automatically configures itself

as a Lightroom External Editor, allowing photographers to send selected images directly from Lightroom for further quality enhancement.

Whether used as standalone software or integrated into an existing editing workflow, Aiarty helps improve image quality while keeping processing entirely offline for greater privacy and control.

Typical workflows include:

- Cull and develop photos in Lightroom, then enhance selected images in Aiarty.
- Upscale images for 4K, 8K, 32K, and large-format printing.
- Reduce noise, fix soft photos, and restore compression artifacts.
- Process commercial and personal projects entirely offline safely.

Pricing and Availability

Aiarty Image Enhancer v3.13 is available for Windows and macOS. Existing licensed users can update for free, and new users can download a free trial from the official website.

For a limited time, the Lifetime License is available for \$79 (regularly \$155), a 49% discount, and includes free lifetime software updates and commercial usage.

- Cross-platform Lifetime License: \$79 for 1 Windows PC + 1 Mac.
- Lifetime License: \$79 for 3 Windows PCs.
- Lifetime License: \$79 for 3 Mac computers.
