TORONTO, ON, CANADA, August 11, 2026 /EINPresswire.com/ -- RiskThinking.ai, a financial risk analytics firm focused on turning climate risk into practical financial metrics, announced that David Crammond has joined the company to drive growth of its customer franchise and revenue base.

Crammond is based in Toronto and brings decades of experience across structured finance, credit derivatives, regulatory capital solutions, carbon markets, and institutional client development. His mandate at RiskThinking.ai will center on deepening relationships with banks, insurers, asset managers, pension funds, and other institutions that need forward-looking, asset-level climate risk analytics.

Crammond's background includes senior leadership roles across North America, Europe, and Asia, including positions at Markit Group Asia, ABN AMRO, CIBC Wood Gundy, and Orchard Global, as well as more recent work pioneering carbon securitization and climate-linked commercial development.

At RiskThinking.ai, his experience is well aligned with the firm's commercial expansion as the company continues to broaden its reach in climate risk intelligence and regulatory-ready analytics. As a provider of asset-level physical climate risk modeling for financial institutions, government agencies, and corporates, the firm provides decision critical analytics powered by full probability distributions that include extreme tail risks.

"David brings a rare combination of capital markets depth, entrepreneurial leadership, and institutional client connectivity," the company said in announcing the appointment. "His track record in building franchises and translating complex risk solutions into commercial growth will support RiskThinking.ai's next phase of market expansion."

Crammond said the opportunity to join RiskThinking.ai reflects the growing importance of high-quality physical climate risk analytics for the financial sector. "RiskThinking.ai has built a highly differentiated platform establishing a benchmark for high integrity climate risk forecasting at a time when banks, investors, regulators, and corporates are demanding more precise, asset-level understanding of climate exposure and resilience," he said.

RiskThinking.ai's platform includes its Climate Digital Twin™ and related products that support enterprise risk management, climate physical risk analysis, and adaptation planning for banks, insurers, asset managers, corporates, and public institutions. The company says its analytics are designed to help organizations assess climate uncertainty, model tail risks, and make more defensible strategic and investment decisions.

- About RiskThinking.ai
RiskThinking.ai is a climate financial risk analytics company that converts climate uncertainty into practical financial metrics through its patented Climate Digital Twin™ platform and related data products. Its offerings are designed to support decision-making for banks, insurers, asset managers, corporations, and governments by modeling physical climate risk at the asset level and across a range of future scenarios.
