

SpecCoat Earns ISO 13485 Certification Across All Three Facilities

FREMONT, CA, UNITED STATES, August 6, 2026 /EINPresswire.com/ -- Specialized Coating Services ([SpecCoat](#)), an established leader in advanced printed circuit board (PCB) coating and electronic ruggedization solutions, has achieved [ISO 13485](#) certification across its three facilities.

The certification strengthens SpecCoat's ability to support customers building electronics for diagnostic and other regulated medical devices.

SpecCoat's newest Fremont location also completed ISO 7 certification of a 5,000-square-foot cleanroom, providing a controlled environment for coating and assembly processes that require the highest levels of cleanliness. Together, the two certifications expand SpecCoat's ability to meet the stringent qualification demands of medical device work.

With certification now in place company-wide, SpecCoat can offer the same audit-ready medical device support at any of its three sites. Customers can place work at the location that best fits their timeline or program needs, without gaps in compliance or documentation between facilities.

The certification adds to SpecCoat's existing compliance scope, which includes Nadcap, AS9100D, ISO 9001, ITAR registration and ANSI/ESD S20.20 for electrostatic discharge control. SpecCoat is also pursuing CMMC Level 2 certification to further support aerospace and defense customers.

"Earning ISO 13485 across every SpecCoat facility reflects the same discipline we bring to every program we run," said Doug Bartels, Chief Executive Officer of SpecCoat. "Medical device customers can count on that same quality and traceability no matter which of our sites supports their build."

Customers, engineering partners and prime contractors looking to optimize their electronics ruggedization programs can contact SpecCoat directly through speccoat.com to coordinate technical consultations or request quotes.

About Specialized Coating Services (SpecCoat)

Founded in 1994, SpecCoat is a premier partner for ruggedized conformal coating solutions, specializing in the protective coating and encapsulation of printed circuit board assemblies (PCBA). Operating two facilities in Fremont, California, and one in Billerica, Massachusetts, SpecCoat provides critical ruggedization services that protect sensitive electronics from moisture, thermal cycling, vibration and contamination for customers in the aerospace & defense, space and medical device industries.
