[Foreign Body Removal Market Size](#) and Growth Outlook

The foreign body removal market has experienced robust expansion, with its value expected to increase from \$2.1 billion in 2025 to \$2.24 billion in 2026, marking a compound annual growth rate (CAGR) of 6.9%. This growth during the past years has been fueled by factors such as the rising number of accidental ingestion incidents,

broader availability of emergency medical services, greater access to essential surgical tools, higher hospital admissions, and growing awareness about the importance of timely foreign body extraction.

Looking ahead, the foreign body removal market is projected to continue its upward trajectory, reaching \$2.89 billion by 2030 at a CAGR of 6.5%. This anticipated expansion is largely driven by the increased use of advanced endoscopic technologies, a surge in outpatient surgical procedures, the growth of ambulatory surgical centers, enhanced investments in emergency

care infrastructure, and a stronger emphasis on minimally invasive treatment methods. Key trends expected to influence the market include the widespread adoption of minimally invasive retrieval devices, increased utilization of endoscopic removal tools, demand for precision surgical instruments, expansion of emergency care protocols, and heightened focus on patient safety and operational efficiency.

Understanding Foreign Body Removal Procedures

Foreign body removal involves extracting objects that have become lodged in various parts of the body. These foreign bodies can enter the body through ingestion, inhalation, or injury, potentially affecting multiple regions. The procedure aims to safely and effectively remove these objects to prevent complications and restore normal function.

Rising Demand for Minimally Invasive Surgery as a Growth Catalyst

One of the primary drivers pushing the foreign body removal market forward is the growing preference for minimally invasive surgical techniques. These procedures require smaller incisions, reduce recovery time, and typically involve fewer stitches compared to traditional surgeries. Foreign body removal is often performed using minimally invasive methods to extract objects swallowed or lodged inside the body, making such surgeries increasingly popular.

For example, in February 2024, the American Academy of Facial Plastic and Reconstructive Surgery reported that approximately 83% of all medical procedures conducted in 2023 in the United States were minimally invasive, with only 17% involving standard surgical methods. Additionally, the American Society of Plastic Surgeons noted that cosmetic minimally invasive procedures rose from 23.7 million in 2022 to 25.4 million in 2023, highlighting the growing acceptance and demand for less invasive treatment options. This shift strongly supports the foreign body removal market's expansion.

Regional Overview of the Foreign Body Removal Market

In 2025, North America was the leading region in the foreign body removal market. The market report covers various geographical areas including Asia-Pacific, South East Asia, Western Europe, Eastern Europe, North America, South America, the Middle East, and Africa, offering a comprehensive perspective on regional market dynamics and growth potential.

Our 2026 reports feature deeper market intelligence with market attractiveness scoring and analysis, total addressable market (TAM) analysis, company scoring matrix graphics and tables, Excel-based forecasting dashboards, market hotspots infographics, key technologies and future trend analysis, and updated graphics and tables.
