

Fractional Radio Frequency Body Device Market Research Explores Growth Within A \$2.3 Billion Opportunity

The Business Research Company's Fractional Radio Frequency Body Device Market Research Explores Growth Within A \$2.3 Billion Opportunity

LONDON, GREATER LONDON, UNITED KINGDOM, August 7, 2026

/EINPresswire.com/ -- "The [fractional radio frequency body device market](#)

has been experiencing significant growth recently, driven by advancements in technology and shifting consumer preferences toward non-surgical cosmetic treatments. As interest in minimally invasive procedures rises, this market is positioned for continued expansion. Let's explore the current market size, key growth drivers, dominant regions, and emerging trends shaping the future of this industry.

Expected to grow to \$2.31 billion in 2030 at a compound annual growth rate (CAGR) of 13.5%"

Strong Expansion Seen in the [Fractional Radio Frequency Body Device Market Size](#)

The fractional radio frequency body device market has rapidly expanded in recent years. It is projected to grow from \$1.22 billion in 2025 to \$1.39 billion in 2026, reflecting a compound annual growth rate (CAGR) of 13.7%. This historical growth is largely attributed to increased cosmetic

procedures, advancements in radiofrequency technology, a rising desire for non-surgical treatments, the expansion of medical spas, and heightened awareness of body aesthetics.

disposable incomes, and broader acceptance of aesthetic treatments. Key trends anticipated during this period involve the growth of non-invasive body contouring, heightened demand for skin tightening procedures, wider adoption of portable RF body devices, expansion of medical spa services, and an overall increase in consumer focus on aesthetic wellness.

Understanding Fractional Radio Frequency Body Devices

A fractional radio frequency body device is a medical aesthetic tool that delivers radiofrequency energy in fractional patterns targeting specific skin areas and underlying tissues. This process stimulates collagen production, promotes skin tightening, and improves skin texture through controlled thermal effects. The technology is commonly used in non-invasive cosmetic procedures aimed at body contouring and skin rejuvenation.

Growing Preference for Non-Invasive Aesthetic Treatments Fueling Market Demand

One of the primary forces behind the fractional radio frequency body device market growth is the increasing demand for non-invasive aesthetic procedures. These treatments enhance appearance without surgery, offering advantages such as quicker recovery times and reduced health risks. Patients are showing a strong preference for minimally invasive options for skin tightening and body contouring, which aligns perfectly with the capabilities of fractional RF devices.

Supporting this trend, in June 2025, the American Society of Plastic Surgeons (ASPS) reported that 28.5 million minimally invasive aesthetic treatments were performed in the United States in 2024, up from 28.1 million in 2023, marking a 1.5% year-over-year increase. This rising acceptance of non-surgical procedures is a significant driver for the fractional radio frequency body device market.

North America Leads While Asia-Pacific Emerges as the Fastest Growing Region

In terms of regional dominance, North America held the largest share of the fractional radio frequency body device market in 2025. Meanwhile, the Asia-Pacific region is poised to be the fastest-growing market during the forecast period. The industry report also includes key areas such as South East Asia, Western Europe, Eastern Europe, South America, Middle East, and Africa, providing a global perspective on market trends and growth opportunities.

The 2026 edition of our market reports now delivers enhanced analytical coverage through market attractiveness scoring and analysis, total addressable market (TAM) analysis, company scoring matrix graphics and tables, Excel-based forecasting dashboards, market hotspots infographics, key technologies and future trend analysis, plus updated graphics and tables.
