

Hosted.com® Outlines Website Setup Tools for Small Businesses

Hosted.com® outlines connected domains, hosting, email, security, backups, and site management tools for SMEs, startups, freelancers, and entrepreneurs.

CA, UNITED STATES, August 19, 2026 /EINPresswire.com/ -- Hosted.com®, a domain registration and web hosting provider based in San Diego, has announced a renewed focus on connected website setup services for SMEs, startups, freelancers, and entrepreneurs, helping early-stage businesses organize the main services required to establish and manage a business website.

For most businesses, [launching a website](#) starts with finding and registering a domain name. The domain provides the address used to find the website. From there, hosting stores the website files and makes them accessible to visitors. Email accounts linked to a domain support consistent business communication, while security and backup tools help protect website data and reduce disruption when technical issues occur.

“

Most new businesses start with a domain, but they also need hosting, email, security, and management tools. Hosted.com® consolidates these services, helping SMEs build a solid website foundation.”

Wayne Diamond

Hosted.com® [provides Domain Registration](#), Web Hosting, and WordPress Hosting services for businesses and individuals. Its hosting plans include cPanel access, SSD storage, LiteSpeed Webserver, SSL certificates, daily backups, email accounts, MySQL databases, 1-click installs,

security tools, and website migration. The company has highlighted these features as part of a complete website setup for small businesses.

This addresses a common issue for SMEs and startups. Domains, hosting, email, security, and management are often treated as separate tasks. When these services are managed through

different providers or unfamiliar systems, basic website maintenance can take longer and add unnecessary complexity for beginners and small teams.

The included cPanel control panel centralizes many of these tasks. Customers can manage files, domains, email accounts, databases, and security settings in a single, user-friendly dashboard.

“Most new businesses often start with a domain name, but the website still needs hosting, email, security, and management tools behind it. Hosted.com® helps bring these core services together so SMEs, startups, and entrepreneurs can start with the right foundations for a website without needing to handle each part as a separate element,” said Wayne Diamond, CEO of Hosted.com®

The company has also emphasized the relationship between website setup and business presentation. A domain name can influence brand recognition. Hosting affects website availability and page delivery. Domain-based email can support a more consistent identity across customer communication. For small businesses and freelancers, these elements shape how a business appears to clients, partners, and visitors.

Hosted.com®’s [WordPress Hosting plans](#) are available for businesses that use WordPress to build and manage a website. The company's services are positioned around helping businesses manage the technical foundation behind the site, including performance, security, and stability.

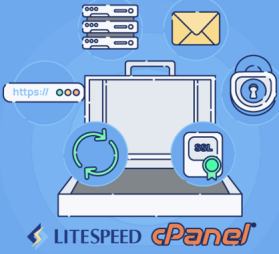

The company focuses on SMEs, startups, and entrepreneurs who need website infrastructure without unnecessary complexity. Hosted.com® is presenting its domain, hosting, email, security, backup, and site management tools as connected parts of one website foundation rather than separate elements.
