

APS Extends Proven UPRT Architecture with New Bombardier Program

Bombardier UPRT program builds on APS's transferable fixed-wing UPRT foundation by refining pilot competencies within the operational context of their aircraft.

MESA, AZ, UNITED STATES, August 7, 2026 /EINPresswire.com/ -- Aviation Performance Solutions (APS), the global leader in Upset Prevention and Recovery Training (UPRT), today announced the launch of its new Bombardier Family UPRT Program, extending APS's proven training architecture with additional aircraft-relevant integration for Bombardier pilots and operators.

Bombardier Aircraft

APS's integrated UPRT architecture is designed to develop resilient upset prevention and recovery competencies that transfer across fixed-wing aircraft. The Bombardier Family UPRT Program builds on that foundation by helping pilots further integrate those competencies within the handling characteristics, automation environment, performance considerations, and mission profiles associated with Learjet, Challenger, and Global aircraft.

Rather than teaching a separate set of recovery techniques for each aircraft type, APS first develops the foundational knowledge, skills, and decision-making competencies pilots need to recognize, prevent, and recover from airplane upsets across fixed-wing operations. Aircraft-family programs then provide an additional layer of operational refinement, helping pilots apply those proven competencies with greater relevance to the aircraft they fly.

“

Our Bombardier Family Program builds on a proven UPRT foundation, integrating those competencies into the operational environment Bombardier pilots encounter every day”

Paul 'BJ' Ransbury

“Effective UPRT must develop resilient pilot competencies that transfer from one fixed-wing aircraft to another,” said Paul “BJ” Ransbury, CEO of Aviation Performance Solutions. “Our

Bombardier Family Program builds on that proven foundation by further integrating those competencies into the operational environment Bombardier pilots encounter every day, making the training even more relevant and effective without compromising the transferability at the core of the APS methodology.”

Loss of Control In-flight remains the leading cause of fatalities in commercial aviation. Addressing that risk requires more than exposure to recovery maneuvers. Pilots must develop durable competencies in upset recognition, prevention, aerodynamics, decision-making, and recovery, then learn to apply those competencies under realistic operational conditions.

The APS Bombardier Family UPRT Program follows the company’s integrated training architecture, combining academic instruction, advanced simulation, and purpose-built on-aircraft training. This progression allows pilots to establish a strong conceptual and practical foundation before further integrating their skills into the systems, performance characteristics, and operating environment of Bombardier aircraft.

The program supports corporate flight departments, charter operators, owner-pilots, government organizations, and other Bombardier operators seeking to strengthen their defenses against Loss of Control In-flight while improving pilot capability, confidence, and operational readiness.

Comprehensive programs begin at \$4,795.

ABOUT AVIATION PERFORMANCE SOLUTIONS (APS)

We Help Pilots Bring Everyone Home Safely

Aviation Performance Solutions (APS) is the global leader in Upset Prevention and Recovery Training (UPRT), with specialized expertise in Jet UPRT for professional pilots. Focused on reducing Loss of Control In-flight (LOC-I), the leading cause of aviation fatalities, APS delivers a comprehensive training approach that blends academics, on-aircraft instruction, advanced simulation, and virtual reality. APS’s UPRT methodology has been validated through independently verified research showing significant improvements in pilots’ upset recognition, recovery performance, and resilience to startle and surprise in real-world training environments.

Trusted by airlines, business aviation operators, military organizations, and corporate flight departments worldwide, APS helps pilots build the skills and confidence needed to prevent and recover from in-flight upsets. APS’s brand promise reflects the high standard behind every training program: Every Pilot Trained – In Control – All The Time.
