

MG Ship Expands into Europe with AI-Powered Logistics Intelligence Platform

MG Ship Empowers Logistics Providers with Real-Time Shipment Visibility, Predictive Insights and Proactive Risk Management

UNITED KINGDOM, August 10, 2026 /EINPresswire.com/ -- MG Ship, a leading Asian [logistics](#) technology company transforming global supply chains through [predictive intelligence](#) and [real-time visibility](#), today announced its official launch in Europe, introducing a next-generation shipment visibility and intelligence platform designed specifically for freight forwarders and third-party logistics (3PL) providers.

MG Ship Expands into Europe

As global trade becomes increasingly volatile, logistics service providers face mounting pressure from carrier disruptions, geopolitical uncertainty, changing trade regulations, and growing customer demands for real-time shipment transparency. Despite rapid industry digitization, many freight forwarders continue to rely on fragmented systems and manual processes to manage shipments across multiple transport modes and carrier networks.

MG Ship empowers global supply chains with AI, predictive intelligence, and trade insights to enhance logistics, finance, and resilience."

Suki Cheung, CEO of MG Ship

According to MG Ship's market analysis, more than 65% of cargo-tracking activities remain manual, often requiring logistics teams to monitor shipments across multiple carrier portals. This operational complexity contributes to rising labour costs, slower response times, and margin erosion resulting from missed service commitments and unmanaged exceptions.

"Europe is rapidly embracing digital transformation across supply chains, creating a significant

opportunity for intelligent visibility solutions," said Suki Cheung, CEO of MG Ship. "Visibility alone is no longer enough. Logistics providers need predictive intelligence, proactive risk management and actionable insights that help them make faster, better decisions. MG Ship was built to help forwarders turn operational complexity into a competitive advantage, backed by our deep logistics expertise and leadership experience across Asia."

MG Ship combines real-time shipment tracking, AI-powered analytics, and supply chain intelligence into a unified control tower platform. Supporting more than 1,000 global carriers across ocean, air, road, rail and parcel transportation, the platform enables businesses to monitor and manage global shipments through a single interface.

The platform is built around MG Ship's mission to eliminate supply chain friction by transforming fragmented trade data into predictive, actionable intelligence.

Key Capabilities

- End-to-end multimodal visibility

Track shipments seamlessly across ocean, air, road, rail, and parcel networks through a unified platform, eliminating the need to navigate multiple carrier portals.

- Real-time exception and SLA management

Receive instant alerts on delays, disruptions, and potential service-level agreement (SLA) risks, enabling teams to proactively address issues before customer commitments are affected.

- AI-powered supply chain intelligence

Leverage predictive insights to optimize logistics operations, improve route management, and support data-driven decision-making.

- Advanced trade and risk intelligence

Stay ahead of geopolitical developments, trade lane disruptions, tariff changes, and regulatory updates through actionable intelligence embedded directly into operational workflows.

- Enhanced customer experience

Provide customers with real-time shipment visibility and proactive exception notifications to improve service quality and strengthen client relationships.

With connectivity spanning more than 220 countries and territories, MG Ship aims to establish itself as a leading logistics intelligence platform for enterprises operating in increasingly complex global supply chains.

To mark its launch, MG Ship is introducing an exclusive 60-Day Risk-Free Trial through its Enterprise Early Access Program (EEAP). Available to eligible freight forwarders and logistics providers throughout August and September 2026, the program enables companies to deploy MG Ship across selected trade lanes and evaluate the platform's operational and financial impact

before making a long-term commitment.
