

PractiTest Expands Global Infrastructure with New AWS Hosting Region in Australia

PractiTest- the leading test management and QA Intelligence platform, introduces a new AWS Hosting Region in Australia

REHOVOT, ISRAEL, August 12, 2026 /EINPresswire.com/ -- Customers can now choose to host their testing data in Australia, alongside existing US and EU hosting options.

Rehovot – [PractiTest](#), the end-to-end test management and QA intelligence platform for QA teams, today announced the availability of a new hosting region in AWS Australia, giving customers greater flexibility over where their data is stored.

The new Australian hosting option joins PractiTest's existing infrastructure in the United States and European Union, enabling organizations to choose the hosting location that best aligns with their performance, data residency, and compliance requirements.

"As local regulations across the globe are becoming more strict, where data is hosted has become an increasingly important consideration," said Yaniv Iny, COO at PractiTest. "Adding an Australian hosting region gives our customers more choice while maintaining the security, reliability, and performance they expect from PractiTest."

The new [AU Data center](#) is particularly valuable for organizations across Australia, New Zealand, and the broader Asia-Pacific (APAC) region, helping reduce latency while supporting local data residency requirements and internal governance policies.

Customers hosted in Australia will receive the same enterprise-grade experience available across all PractiTest environments, including:

- Secure infrastructure hosted on Amazon Web Services (AWS)
- High availability and reliability
- Enterprise-grade security, including SOC2 and ISO 207001
- Full access to PractiTest's complete test management and QA intelligence platform, including AI-powered capabilities

The addition of an Australian hosting region reflects PractiTest's ongoing investment in supporting global engineering and QA teams with flexible deployment options that meet regional business and regulatory needs.

The Australian hosting option is available immediately for new customers, with migration

options available for existing customers upon request.

About PractiTest

PractiTest is an AI-powered Test Management and QA Intelligence Platform that goes beyond execution, to actual business answers. While tests run, defects get logged, and dashboards fill up, the hardest questions still go unanswered: Are we ready to release? Are we covered where it matters? What's the real risk? PractiTest closes that gap. By turning QA data into clear indicators, insights, and suggested actions, release stakeholders get real-time clarity on risk, coverage, and release readiness. Built on flexible data structure, agnostic integrations, SmartFox AI, and QA Intelligence, you always know where you stand, and can release with confidence.
