

QMS2GO Selected for Source Louisiana Accelerator Program Powered by Blue Wave

Selection connects QMS2GO with Louisiana's supplier ecosystem and strengthens its mission to help manufacturers become buyer-ready and audit-ready.

RUSTON, LA, UNITED STATES, August 12, 2026 /EINPresswire.com/ -- [QMS2GO](#), an AI-powered quality management system built for [small and mid-sized manufacturers](#), has been selected to participate in the 2026 Source Louisiana Accelerator Program, powered by Blue Wave and delivered in partnership with Louisiana Economic Development.

The six-month supplier readiness accelerator is designed to help Louisiana businesses strengthen their operations, meet the standards expected by major corporations, and compete for procurement and contracting opportunities connected to major projects across the state. The program combines assessments, workshops, practical guidance, and connections with industry partners and major buyers.

Blue Wave specializes in supplier development and prepares businesses to meet the expectations of large corporate and institutional buyers. According to Louisiana Economic Development, Blue Wave has worked with more than 1,200 graduates, and 70 percent report revenue growth within one year of completing the program.

The Source Louisiana Accelerator focuses on seven areas that major buyers consider when evaluating suppliers: Health, Safety, Security and Environmental; Cybersecurity; Quality; Corporate Policies; Financial; Technical Capabilities; and AI & Optimization. Companies that successfully complete the program receive a Blue Wave badge signaling supplier readiness and increased visibility through the Source Louisiana ecosystem.

For QMS2GO, the selection is particularly significant because supplier readiness is closely connected to the problem the company was created to solve.

"Manufacturers can have excellent equipment, experienced people, and the technical ability to do the work, but major customers increasingly expect them to prove that their processes are controlled and that they can consistently meet requirements," said Onega Ulanova, Co-Founder and CEO of QMS2GO. "Quality management, traceability, documentation, supplier controls, cybersecurity, and operational discipline can determine whether a company is ready to compete for larger opportunities."

QMS2GO helps manufacturers build, operate, and maintain [quality management systems](#) in one connected platform. The software brings together controlled documentation, training, supplier management, inspections, nonconformances, corrective actions, audit evidence, and other quality processes that are often managed through spreadsheets, Word documents, email, and disconnected systems.

Participation in the Source Louisiana Accelerator will give the QMS2GO team additional exposure to the requirements major buyers use to evaluate potential suppliers and to the challenges Louisiana businesses encounter as they prepare to enter larger supply chains.

“This is what makes the Blue Wave program especially valuable to us,” Ulanova said. “We are not only strengthening QMS2GO as a company. We are getting closer to the buyer requirements our customers ultimately need to satisfy. That knowledge can directly influence how we continue developing the platform and helping manufacturers become audit-ready and buyer-ready.”

The program is part of Louisiana Economic Development’s broader Source Louisiana initiative, which is designed to increase the visibility of Louisiana vendors, subcontractors, and suppliers and connect them with major projects throughout the state. LED says Source Louisiana is being used by large-scale projects involving companies including Entergy, Hyundai, Woodside, and Meta to identify Louisiana suppliers.

For QMS2GO, participation represents another step toward its broader objective of helping smaller manufacturers compete for work that historically may have been difficult to pursue because of quality, compliance, and supplier qualification requirements.

“Louisiana is attracting major industrial investment, and those projects create opportunities throughout the supply chain,” Ulanova said. “Our goal is to help more local manufacturers reach the point where they can confidently say not only that they can do the work, but that they have the systems and evidence to prove it.”

About QMS2GO

QMS2GO is an AI-powered quality management system designed for small and mid-sized manufacturers. The platform helps companies build, run, and improve their quality management systems while maintaining the documentation and objective evidence needed for customer and certification audits. QMS2GO is headquartered in Louisiana.
