

MyMind Studio Launches Revora, a Free AI Website Revenue Audit

Revora analyzes 40+ website factors to identify revenue leaks, conversion barriers, search visibility gaps and AI-readiness issues.

NEWPORT BEACH, CA, UNITED STATES, August 10, 2026 /EINPresswire.com/ -- MyMind Studio Launches Revora, a Free AI [Website Revenue Audit](#)

New 30-second audit analyses 40+ factors across clarity, conversion, trust, search, AI-search readiness and speed to help founders identify website revenue leaks

Revora helps founders monitor website performance and identify AI-search readiness issues over time.

MyMind Studio, a product design and development studio serving founders globally, today announced the launch of Revora, a free Website Revenue Audit designed to help founders identify website problems that may be preventing visitors from becoming customers.

“

MyMind Studio built Revora to help founders see their website the way customers, search engines and AI systems do — and know what to fix first.”

Steve Dawson

Traditional website audits often produce long lists of technical issues. Revora takes a different approach by evaluating a website across 40+ checks and six revenue-focused dimensions: 3-second clarity, conversion paths, trust signals, search foundations, AI-search readiness and speed.

The result is a Revenue Aura Score and a prioritised list of website “leaks,” explaining what needs attention, why it

matters and what should be fixed first.

The initial audit takes approximately 30 seconds, requires no installation, signup or credit card, and begins simply by entering a website URL.

Beyond a Traditional Website Audit

Revora was built around a simple question:

What is stopping this website from turning visitors into customers?

The audit evaluates a website from the perspective of a potential customer as well as search engines and emerging AI systems.

It examines whether visitors can quickly understand what a business offers, whether there is a clear path to conversion, whether sufficient trust signals are present, whether search engines can discover important content, whether the site is prepared for AI-powered search, and whether technical performance is creating unnecessary friction.

Rather than overwhelming founders with disconnected technical warnings, Revora organizes its findings around potential business impact and provides practical recommendations for what to address first.

Built for the New Search Landscape

Search is changing rapidly. Businesses now need to be discoverable not only through traditional search engines, but also through AI-powered discovery experiences.

Revora therefore includes AI-search readiness as one of its core audit dimensions. It evaluates whether website content and structure are understandable to AI systems and whether the site is positioned to potentially appear in AI-generated answers.

This gives founders a new question to consider:

Google may know your website exists. But can AI understand why someone should choose

you?

Monitor, Compare and Improve

Revora goes beyond a one-time report.

Users can activate Autopilot, which automatically re-scans their website weekly and sends an email when the score changes, helping them monitor improvements and identify new issues.

The platform also includes a Head-to-Head competitor mode, allowing users to compare their website against a competitor across the same six dimensions and identify areas where they may be falling behind.

Revora is also building The State of Founder Websites, an anonymous dataset designed to provide a broader picture of website performance, common revenue leaks, search visibility and AI-search readiness across founder businesses.

Built In-House by MyMind Studio

Revora was developed by MyMind Studio using an in-house crawler, checks and scoring system based on the same standards the studio applies when designing and building digital products for clients.

The workflow is simple:

Audit → Identify the leak → Prioritise the fix → Improve → Re-scan

Founders can use the recommendations independently or work with MyMind Studio to address underlying product, design, conversion, SEO or technical issues.

Free to Try

Revora is available to founders, startups, marketers, agencies and businesses looking for a clearer understanding of their website performance.
