

Montreal Associates Launches Global IT Contractor Hub and Rate Benchmarking Tool

New platform helps organisations benchmark IT contractor rates while giving technology contractors access to market insights and career resources.

BARCELONA, SPAIN, August 10, 2026 /EINPresswire.com/ -- Montreal Associates Launches New Contractor Resources to Help Organisations Navigate a More Transparent Hiring Market

As conversations around pay transparency continue to influence hiring strategies worldwide, international technology recruitment specialist Montreal Associates has launched two new resources designed to help organisations and technology contractors make more informed decisions.

The company's new [Contractor Hub](#) and [Global IT Contractor Rate Benchmarking Tool](#) provide practical market insight for organisations hiring specialist technology contractors while supporting contractors with resources, career advice and access to opportunities throughout their contracting journey.

Although the EU Pay Transparency Directive has brought compensation into sharper focus across Europe, organisations in the United States and Canada are also placing greater emphasis on transparent pay practices, competitive contractor rates and equitable hiring processes.

For organisations operating across multiple markets, understanding how contractor rates vary between technologies, locations and skill sets is becoming increasingly important.

The Global IT Contractor Rate Benchmarking Tool has been developed to provide greater visibility into average contractor day rates and hourly rates across a range of technology disciplines and international markets. Rather than relying on assumptions or outdated market information, organisations can benchmark rates to support hiring decisions, workforce planning and project budgeting.

The platform has been designed to help organisations:

- Benchmark contractor rates across technology disciplines and global markets
- Build more accurate contractor budgets
- Improve workforce planning and resource allocation
- Remain competitive when attracting specialist technology talent

- Understand regional differences in contractor rates
- Support fair and transparent hiring decisions

Alongside the benchmarking tool, Montreal Associates has also introduced a dedicated Contractor Hub, bringing together technology contract opportunities with practical guidance for contractors at every stage of their careers.

The hub includes market insights, contractor advice, career resources and specialist content designed to help contractors navigate an evolving technology landscape while staying informed about industry trends.

As a specialist technology recruitment business operating across Europe and North America, Montreal Associates focuses exclusively on enterprise technology recruitment, supporting organisations with contract, permanent, executive search and workforce solutions across disciplines including SAP, Microsoft, Salesforce, ServiceNow, Cyber Security, Data, AI & Analytics, Infrastructure & Cloud and Software Development.

Commenting on the launch, Maurizio Giofrè, Director of IT Contracts & Managed Services at MA said:

"As more organisations build global tech teams, hiring managers want confidence that they're paying competitive contractor rates, and contractors want greater transparency around what the market looks like.

We created the Global IT Contractor Rate Benchmarking Tool and Contractor Hub to make those conversations easier. The goal isn't to replace the experience or market expertise you get directly from our consultants, but to give organisations and contractors a practical starting point backed by real market insight.

For businesses, it's about making better hiring decisions, planning projects more effectively, and staying competitive when specialist skills are in high demand. For contractors, it's about having access to useful resources, market information and opportunities that help them make informed career decisions.

These new resources are another way we're helping both clients and contractors navigate an increasingly complex market with greater confidence."

The launch reflects wider changes across the global technology hiring market.

As organisations increasingly compete for specialist skills across international markets, access to accurate contractor rate data is becoming an important part of workforce planning. At the same time, contractors are seeking greater transparency around market expectations and earning potential when considering new opportunities.

By bringing together contractor market intelligence, career resources and live technology opportunities, the new Contractor Hub aims to support both sides of the hiring process while helping organisations make confident hiring decisions in an increasingly competitive market.

The Contractor Hub and Global IT Contractor Rate Benchmarking Tool are now available to organisations and technology professionals operating across the United States, Canada, Europe and other international technology markets.

To explore the Contractor Hub or use the Global IT Contractor Rate Benchmarking Tool, visit www.montrealassociates.com.
