

Attrove Completes SOC 2 Type I with Socify by TAC Security

Attrove completes its SOC 2 Type I with Socify, reinforcing its commitment to enterprise trust, data protection, and security as it scales.

NEW YORK, NY, UNITED STATES, August 10, 2026 /EINPresswire.com/ -- Attrove is comms-context infrastructure that catches the conversations going quiet. It connects a team's email, Slack, meetings, and calendar, then monitors those channels in the background to surface what was committed, what is owed, and what has gone quiet, so nothing important slips. Attrove has strengthened its enterprise posture by completing SOC 2 Type I, powered by Socify by TAC Security.

As AI platforms become embedded in day-to-day operations, enterprise buyers now expect clear proof that the systems handling their sensitive workflows are secure, controlled, and audit-ready.

Operating with a lean team, Attrove needed a structured way to prove its controls, centralize evidence, and demonstrate readiness without slowing product development. With Socify, Attrove implemented a SOC 2 program covering Security and Confidentiality. Socify helped Attrove map existing controls to SOC 2 requirements, organize evidence across its systems, connect controls to real system behavior, and turn everyday workflows into audit-ready processes.

"Enterprise buyers want proof that the systems handling their most sensitive workflows are secure and well controlled. Completing our SOC 2 Type I with Socify let us demonstrate that early, without pulling a lean team off building. It gave us a clear control framework and a single place for evidence, so trust scales with us as we grow."

Tim Monzures, Founder & CEO, Attrove

Through Socify, Attrove gained clearer visibility across its systems, controls, and risks, and streamlined CPA review through a single Audit Vault. Socify's platform is designed to cut audit preparation effort by roughly 80% and reduce costs by up to 75 to 80% compared with traditional, consulting-led SOC 2 programs.

With this milestone, Attrove is better positioned to serve enterprise customers, strengthen buyer confidence, and demonstrate continuous trust as it scales.

About Attrove

Attrove is comms-context infrastructure that catches the conversations going quiet. By connecting email, Slack, meetings, and calendar over secure OAuth, Attrove detects commitments, follow-ups, and the work that has stalled, then proactively surfaces what needs attention across a team, for both people and AI agents. Attrove, Inc. is a Delaware company. Website: attrove.com

About Socify.ai

Socify is a SOC 2 compliance and security operations readiness platform designed to help organizations streamline audit preparation and continuously maintain compliance. It centralizes evidence collection, maps security controls to SOC 2 requirements, and provides real-time visibility into control effectiveness across systems and processes. By automating documentation, tracking gaps, and simplifying auditor collaboration, Socify reduces the manual effort involved in SOC 2 reporting and enables businesses to stay audit-ready with greater speed, accuracy, and consistency.

About TAC Security (TAC InfoSec Limited), NSE: TAC

TAC Security is a publicly listed global cybersecurity company specializing in vulnerability management. Serving 10,000+ clients across 100+ countries, the company is among the world's largest vulnerability management providers by client count. Its flagship platform, ESOF (Enterprise Security in One Framework), enables cyber risk quantification, vulnerability assessment, and AI-driven security analysis. TAC Security holds certifications including CREST and ISO standards, and partners with global technology companies such as Google, Microsoft, and Meta.
