/EINPresswire.com/ -- [Centauri Systems](#), a Google

Cloud Partner, today announced that Launchpad, its fully managed developer portal built exclusively for [Apigee X](#), is available on Google Cloud Marketplace. Enterprise API teams can now deploy a production-grade developer portal through their existing Google Cloud account, with Marketplace purchases counting toward their Google Cloud committed spend.

“

Launchpad is the portal your Apigee platform deserves: native from day one, ours to maintain forever, and now one line item on the Google Cloud bill you already pay.”

Jyothi K Reddy, Founder and CEO of Centauri Systems.

Launchpad extends an enterprise's Apigee investment by answering a question most platform teams never get to ask: not whether they can build and run a developer portal, but whether they should own that infrastructure forever. Today, teams running portals on Drupal, custom React stacks, or aging content platforms carry a permanent engineering obligation. Security patching, framework upgrades, middleware sync layers, and CMS maintenance consume roadmap capacity that was never scoped and never ends. Launchpad removes that obligation entirely.

"I helped build the original Apigee developer portal, so I have spent years watching talented platform teams inherit portal infrastructure they never planned to own," said Jyothi K Reddy, Founder and CEO of Centauri Systems. "Apigee is a world-class API platform. The portal in front of it should not be a second product your team has to build, patch, and babysit. Launchpad gives enterprises a portal that is native to Apigee on day one, managed by us forever, and now procurable in the same place they already buy Google Cloud."

Built for Apigee, delivered as SaaS, as every Launchpad customer receives a dedicated, single-tenant environment on Google Cloud, running on Cloud Run with Cloud SQL and Cloud Storage, fully isolated per customer and operated by Centauri Systems. Key capabilities include:

- Multi-org Apigee federation. Launchpad is the only developer portal that federates multiple Apigee organizations, whether structured by business unit, region, or acquisition, into a single unified portal experience. Enterprises with complex Apigee estates no longer need one portal per org.
- Native Apigee integration. API products, apps, credentials, and developer onboarding flow directly from Apigee X with no middleware or sync layer for the customer to build or maintain.
- AI Page Builder and AI Theme Builder. Teams create custom pages without a separate CMS, and portal branding is generated automatically from existing company assets.
- Bring Your Own Components. Engineering teams that want deeper customization can publish their own React components to the portal through Launchpad's SDK, with versioned promotion and instant rollback.
- Enterprise-grade operations. Centauri Systems handles hosting, upgrades, security patching, monitoring, and scaling, so customer teams ship API programs instead of maintaining portal infrastructure.

Purchasing Launchpad through Google Cloud Marketplace consolidates billing on the customer's existing Google Cloud invoice, simplifies vendor onboarding, and allows spend to draw down against Google Cloud commitments. Private offers are available for enterprise agreements.

Launchpad is available today. Enterprises can learn more, view pricing, and book a walkthrough at <https://centaurisystems.io/products/launchpad>. The Google Cloud Marketplace listing is accessible from the same page.

About Centauri Systems

Centauri Systems builds managed platform products for enterprises on Google Cloud. Its flagship product, Launchpad, is a fully managed, single-tenant developer portal built exclusively for Apigee X, founded on a simple idea: your team should launch API programs, not own portal infrastructure. Orbit. Launch. Scale. Learn more at centaurisystems.io/products/launchpad.
