MAIQ Tech Announces MQX Availability on Bitget Wallet as AI and Blockchain Ecosystem Development Advances

Native utility token becomes accessible through Bitget Wallet as MAIQ Tech continues development of its AI, blockchain, and community participation ecosystem.

MAIQ Tech

SINGAPORE, August 11, 2026 /EINPresswire.com/ -- MAIQ Tech, an artificial intelligence and blockchain technology company, has announced that MQX (MAIQ), the native utility token of its developing ecosystem, is now available for trading through Bitget Wallet.

The announcement comes as technology companies continue to explore ways of combining artificial intelligence with decentralized infrastructure and digital asset services. MAIQ Tech is developing an ecosystem intended to connect AI-based tools, blockchain services, digital assets, and community participation through a shared platform.

MQX is designed to serve as the utility token supporting activity within this ecosystem. According to the company, its intended uses include access to future AI-powered services, digital asset functions, and participation mechanisms planned as the platform develops.
The availability of MQX through Bitget Wallet gives users another way to buy, hold, and trade the token while MAIQ Tech continues development of its broader technology infrastructure.

Among the services currently under development is the MAIQ Wallet, a working name that may change before its official launch. The planned wallet is intended to provide users with access to digital assets and AI-related services within the MAIQ ecosystem.

MAIQ Tech is also developing a Proof of Contribution (POC) model focused on recognizing different forms of participation within its network. The proposed system is intended to account for contributions such as content creation, education, development, community participation, and activities that support ecosystem growth.

The approach reflects the company's stated philosophy, “We Change the World Together,” which emphasizes shared participation in the development and use of its technology. Rather than limiting ecosystem participation to financial activity, MAIQ Tech plans to explore ways of recognizing broader forms of contribution.

The company said MQX is expected to act as the economic layer connecting these community activities with its planned AI and blockchain services.

With MQX now accessible through Bitget Wallet, MAIQ Tech will continue working on its wallet, AI-based services, contribution framework, and supporting blockchain infrastructure as the ecosystem moves through its next stages of development.

About MAIQ Tech
MAIQ Tech is a technology company developing an ecosystem that combines artificial intelligence, blockchain infrastructure, digital asset services, and community participation. Its projects include the MQX utility token, planned AI-powered tools, the proposed MAIQ Wallet, and a Proof of Contribution model designed to recognize participation across the ecosystem.
