

ENG Acquires e-verse

NEWPORT BEACH, CA, UNITED STATES, August 11, 2026 /EINPresswire.com/ -- [ENG](#), the largest BIM service and VDC provider in the U.S., today announced the acquisition of [e-verse](#), a construction technology company specializing in AI-powered software solutions for the AEC industry.

With over 7,600 projects completed, including data centers, industrial, healthcare, and infrastructure projects, ENG is backed by a talented team of 800 VDC experts obsessed with exceeding their customers' expectations since 2007. Furthermore, ENG combines close shop-to-field collaboration with a strong focus on constructability, ensuring every design is precise, practical, and ready for installation. Over the past several years, ENG has invested heavily in artificial intelligence, developing industry-leading capabilities that enable its team to deliver more constructable models, work more efficiently, and help customers accelerate project schedules.

Founded in 2021 and based in Miami, Florida, e-verse is a team of architects, engineers, and software developers who build custom AI solutions, automation, and data solutions purpose-built for the AEC industry. Their work spans from AI-powered scheduling and predictive analytics, custom Revit and Autodesk Platform Services integrations, computer vision, to cloud-based process automation. They work on complex projects such as data centers, healthcare facilities, and manufacturing plants. e-verse has also long served as a technology partner for ENG, giving both teams a deep familiarity with one another's people and platforms well before this acquisition.

The addition of e-verse strengthens ENG's already industry-leading AI capabilities and adds a proven team of AEC-focused developers and data scientists to ENG's organization. With this acquisition, ENG will be able to offer customers an even broader range of services, helping them advance further and faster in their own individual AI journeys.

"We're excited to welcome Valentin Noves and the entire e-verse team to ENG," said John Raos, President of ENG. "e-verse has been a trusted technology partner for ENG for years, and we've seen firsthand the caliber of talent and ingenuity they bring to solving real problems in our industry. Bringing their AI and automation expertise fully into ENG allows us to accelerate what we already do best: building more constructable models that improve our customers' schedules, while giving our clients a true partner as they expand their use of AI.
