

RGX Joins GSMA Industry Services' New Circularity Services to Optimize Value Recovered from Enterprise Asset Disposition

RGX has partnered with GSMA Industry Services to help mobile operators reduce e-waste and maximize asset value via its neutral disposition marketplace.

CASTLE ROCK, CO, UNITED STATES, August 12, 2026 /EINPresswire.com/ -- [RGX](#), a neutral, online

“

Enterprises have been stuck choosing between doing right by the planet and doing right by their bottom line. RGX proves that's a false choice.”

Sean Miles, RGX Co-founder

marketplace for enterprise asset disposition (EAD), today announced it has been named a launch partner for GSMA Industry Services' new Circularity Services offering. The new offering is designed to help mobile operators and ecosystem partners reduce e-waste, extend device lifecycles and unlock greater value from existing assets.

This is particularly important as the mobile industry continues to grow. Mobile technologies and services contributed \$7.6 trillion to the global economy in 2025 with

that figure expected to reach \$11.3 trillion by 2030 (GSMA's Mobile Economy 2026 report). As a result, operators are increasingly looking for practical ways to meet sustainability commitments while maintaining and enhancing their commercial performance.

RGX provides a neutral, online marketplace for enterprise asset disposition (EAD), that connects organizations with recovery providers through a single automated platform. The service is designed for an enterprise to optimize returns from redundant devices and equipment through competitive bidding and effective resource management, while supporting responsible disposal practices. Initially available in the United States, the offering is expected to expand internationally over time.

Sean Miles, Co-founder, RGX, said: "Enterprises have been stuck choosing between doing right by the planet and doing right by their bottom line. RGX proves that's a false choice. Through this partnership with GSMA Industry Services, we're able to bring that same value to a much bigger part of the mobile ecosystem."

Paul Logsdon, Co-founder, RGX, said: "Operators are under more pressure than ever to account for where their equipment ends up, and to do it without adding cost or complexity. That's exactly

what RGX was built to solve."

For RGX, this partnership is a chance to put its marketplace model to work for a fast-moving industry by helping enterprises turn equipment they'd otherwise write off into recovered value, while making responsible disposal the default rather than the exception.

About RGX

Founded in 2019, RGX was born from a simple conviction: enterprise asset disposition was broken, and someone needed to fix it. The traditional model locked organizations into limited vendor networks, buried fees, and ignored the environmental cost. Co-founders Sean Miles and Paul Logsdon built something better – an open, neutral marketplace that puts enterprises back in control of asset recovery, reuse, and responsible recycling. Today, RGX is trusted by Fortune 100 companies, telecom leaders, healthcare systems, and retailers nationwide. Learn more at www.recyclegx.com.
