

Asato Achieves FedRAMP Ready Certification for Its Agentic AI IT Asset Optimization Platform

Advances Asato's path to serving US Federal agencies, enabling public-sector IT leaders to securely uncover hidden IT waste and capture savings with agentic AI

SAN JOSE, CA, UNITED STATES, August 12, 2026

/EINPresswire.com/ -- [Asato Corporation, the agentic AI IT asset optimization company](#), today announced that its platform has achieved [FedRAMP Ready certification](#) at the Moderate impact level. [Listed on the FedRAMP Marketplace](#), the designation confirms that Asato's platform is positioned to meet the U.S. federal government's rigorous cloud security and compliance requirements.

“

Asato reaching the FedRAMP Ready milestone at the Moderate impact level reflects a serious commitment to the rigor and continuous assurance the public sector expects.”

Max Aulakh, Managing Director, Ignyte Assurance Platform

Federal agencies are under sustained pressure to modernize their IT estate while reducing waste and demonstrating responsible stewardship of taxpayer dollars. Yet IT spend across software licenses, hardware, cloud subscriptions, and vendor contracts remains fragmented across siloed systems, making waste difficult to see and savings difficult to capture. Asato's agentic AI platform unifies this data into a single, decision-grade view and autonomously analyzes, recommends, and helps act on optimization opportunities across the entire IT asset portfolio.

“FedRAMP Ready is a meaningful signal that a cloud provider has done the hard, foundational work of aligning its security program to Federal standards,” said Max Aulakh, Managing Director at Ignyte Assurance Platform, an independent compliance platform for FedRAMP and other Federal frameworks. “Asato reaching this milestone at the Moderate impact level reflects a serious commitment to the rigor and continuous assurance the public sector expects.”

With FedRAMP Ready designation at the Moderate impact level, public-sector IT leaders can pursue these same outcomes within a framework designed to protect sensitive Federal data.

“Government technology leaders are being asked to modernize and cut waste at the same time, often without a clear picture of where their IT dollars are actually going,” said Sundari Mitra, Founder and CEO of Asato. “Reaching FedRAMP Ready certification is an important step towards bringing Asato’s agentic AI platform to Federal agencies with the security and guardrails they require.”

Asato’s platform helps government agencies:

- Discover and inventory every software application, device, cloud subscription, and vendor contract across the enterprise in a single, unified view
- Surface hidden IT waste including redundant tools, unused licenses, and overlapping spend that is otherwise buried across disconnected systems
- Recommend and act on optimization opportunities through agentic AI, turning insight into measurable savings
- Strengthen risk and compliance posture by continuously monitoring assets and endpoints against security and policy requirements

The FedRAMP program standardizes the security assessment, authorization, and continuous monitoring of cloud products and services used by the Federal government.

About Asato

Asato is an IT Asset Optimization Platform with Agentic AI. Asato’s platform provides a continuous view of enterprise asset data and translates that into intelligence and actionable insights — connecting what organizations own to what it costs, how it's used, what risks it carries, and what actions will drive value.

Asato uses data context and a proprietary Master Knowledge Graph to give IT leaders a single pane of glass across their entire hardware, software and AI portfolio. Asato eliminates shadow IT, cuts wasted spend, optimizes licenses and hardware, governs AI usage, and keeps companies compliant — all from one platform. Customers typically cut 25–30% of their IT Asset spends in just a few weeks and walk into audits and board meetings with confidence instead of anxiety.
