

WareGo Scales Global Operations With AI-Powered Software Modernization

WareGo, a warehouse management software provider trusted by logistics businesses around the world, today shared the story behind its recent global expansion.

NEW YORK, NY, UNITED STATES, August 12, 2026 /EINPresswire.com/ --

WareGo, a warehouse management software provider trusted by logistics businesses around the world, today shared the story behind its recent global expansion. The company claims to have quite an interesting journey powered by a strategic technology partnership with TrangoTech, a [mobile app development company](#).

TrangoTech is well-known for creating incredible mobile and web apps across a variety of industries. Now, they have helped WareGo take things a step further. To serve new global markets, the company had to modernize its core platform quickly. WareGo scaled its software for larger networks and complex regional needs without ever losing its signature speed and reliability.

Once the company scaled globally, legacy systems, manual tracking, and minimal automation threatened to stall their momentum. It led them to search for a strategic technology partner to redesign their system from the ground up. To fix it, WareGo partnered with TrangoTech, which has 20+ years of experience in [custom AI software development solutions](#).

TrangoTech was brought on to lead a full-scale modernization of their warehouse management software with a mandate that went beyond routine upgrades. The engagement thoroughly focused on smarter reporting and analytics to ensure real-time visibility, order fulfillment, and overall warehouse performance.

Additionally, the platform features AI-driven decision tools to minimize manual daily tasks, scalable infrastructure designed for smooth market expansion, and automated workflows that replace manual coordination. Rather than a one-off system upgrade, the companies formed a dynamic alliance. TrangoTech continues to use its AI and engineering tools to support its global expansion.

Right after the modernization effort, WareGo has reported improvements that go beyond its original goals. The platform now supports more sophisticated fulfillment workflows, faster reporting cycles, and a next level of automation. Logistics firms in the USA, the United Kingdom, and the GCC use this to spot trends first, act fast, and grow their profits.

Our collaboration with TrangoTech began as a technology upgrade, but it evolved into a strategic partnership focused on industry foresight," stated Asadullah Khan, CEO at WareGo. "We aim to transition GCC logistics from basic asset tracking to fully autonomous, round-the-clock data fulfillment". The results so far have genuinely impressed us and exceeded our expectations.

WareGo continues to enhance its warehouse management ecosystem with TrangoTech through [AI software development](#) features. Logistics companies can learn a lot from this journey. It implies that upgrading software matters less than choosing a partner built for future expansion. Hiring an expert who already understands you, your company, and your upcoming goals is what truly makes a logistics business succeed.

All in all, WareGo is an intelligent WMS software that helps logistics companies control stock, ship orders, and track items through automation. It is designed to help growing businesses expand their operations smoothly around the world. You can explore their full range of WMS products and capabilities at [Warego.co](https://warego.co).
