Intraocular Lens Market Research Reveals Strong 10.5% CAGR Outlook Through 2030

The Business Research Company's Intraocular Lens Market Research Reveals Strong 10.5% CAGR Outlook Through 2030

The Business Research Company

LONDON, GREATER LONDON, UNITED KINGDOM, August 13, 2026 /EINPresswire.com/ -- "The intraocular lens market has been experiencing swift expansion recently, driven by advances in eye care and increasing demand for vision correction. This sector is set to continue growing robustly as innovations and demographic factors fuel the need for improved lens technologies. Below is a detailed overview of the market size, growth drivers, regional insights, and emerging trends shaping the future of intraocular lenses.

> Expected to grow to $9.5 billion in 2030 at a compound annual growth rate (CAGR) of 10.5%"

Intraocular Lens Market Size and Growth Projections
The intraocular lens market has shown rapid progress over recent years, with its size expected to increase from $5.74 billion in 2025 to $6.37 billion in 2026. This represents a compound annual growth rate (CAGR) of 10.9%. The growth during this period is largely due to factors such as the aging global population, a rise in cataract cases, expansion of ophthalmic surgical facilities, enhancements in surgical techniques, and the availability of advanced intraocular lens designs.

Looking ahead, the market is projected to reach $9.5 billion by 2030, maintaining a strong CAGR of 10.5% from 2026 to 2030. This anticipated growth is driven by increasing demand for spectacle-free vision correction, higher adoption rates of premium intraocular lenses (IOLs), the expansion of ambulatory eye surgery centers, technological advancements in lens materials, and growing investments in ophthalmic care infrastructure. Key trends expected to influence the market include the rising use of premium multifocal and toric lenses, increased demand for cataract and refractive surgeries, wider application of hydrophobic acrylic lens materials, growth in customized vision correction solutions, and heightened emphasis on improving post-surgery visual outcomes.

Understanding Intraocular Lenses and Their Purpose
An intraocular lens is a medical implant inserted inside the eye to replace the natural lens when it is removed during cataract surgery. These artificial lenses serve as substitutes for the eye's original lens and are also used in refractive lens exchange procedures, a type of surgery aimed at correcting vision. The use of IOLs is integral to restoring clear sight in patients undergoing lens replacement surgeries.

Key Factors Propelling Growth in the Intraocular Lens Market
One of the primary growth drivers for the intraocular lens market is the rising volume of ophthalmic surgeries. These surgical procedures address various vision impairments, eye diseases, and aim to enhance visual function. The increasing number of such surgeries is closely linked to the aging population, which faces a higher prevalence of age-related eye conditions requiring surgical treatment. As more ophthalmic surgeries are performed, the demand for intraocular lenses, essential for replacing the natural lens, continues to grow.

For example, in May 2024, data from the Office for Health Improvement and Disparities, a UK government agency responsible for health statistics and population health, revealed that hospital admissions for cataract surgery in England rose from 409,000 cases in the financial year ending 2022 to 516,073 cases in the financial year ending 2023. This increase of 107,073 surgeries highlights the growing need for intraocular lenses, underscoring the market’s expansion.

Regional Overview of the Global Intraocular Lens Market
In 2025, North America held the largest share of the intraocular lens market, serving as a major hub for ophthalmic advancements and surgeries. Meanwhile, the Asia-Pacific region is forecasted to be the fastest-growing market during the upcoming years. The report covers a wide geographical scope including Asia-Pacific, South East Asia, Western Europe, Eastern Europe, North America, South America, the Middle East, and Africa, providing a comprehensive view of global trends and regional opportunities in the intraocular lens market.

Our 2026 reports feature deeper market intelligence with market attractiveness scoring and analysis, total addressable market (TAM) analysis, company scoring matrix graphics and tables, Excel-based forecasting dashboards, market hotspots infographics, key technologies and future trend analysis, and updated graphics and tables.
