

CryptoBreaking Publishes Feature on Crypto Kid Interview With Binance Co-Founder CZ

The feature examines financial freedom, Bitcoin adoption and the financial system through Efe "Crypto Kid" Kelemci's conversation with CZ.

DUBAI, DUBAI, UNITED ARAB EMIRATES, August 18, 2026

/EINPresswire.com/ -- CryptoBreaking has published a new editorial feature based on an [interview](#) between 18-year-old crypto entrepreneur [Efe Kelemci](#), known as [Crypto Kid](#), and Changpeng Zhao (CZ), co-founder of Binance.

The interview took place in connection with the launch of CZ's book, *Freedom of Money*, and covers financial freedom, Bitcoin, blockchain technology, monetary policy and financial education.

Crypto Kid Interviews Binance Founder CZ on Financial Freedom and Bitcoin's Future

During the conversation, Crypto Kid asks CZ to explain how he views the traditional financial system and why understanding money is important for younger generations entering the digital asset sector.

CZ discusses restrictions that can exist within traditional financial systems, including limitations on transferring funds, the impact of monetary expansion on purchasing power and the role of financial intermediaries.

"We're brainwashed to think about money in a very simplistic way," CZ says during the interview.

He also describes financial freedom as extending beyond the accumulation of wealth. According

to CZ, greater control over how individuals store and transfer value is an important component of monetary sovereignty.

“You want sovereignty. You want control over your money,” CZ says.

The conversation also addresses the role of blockchain technology as financial infrastructure. CZ discusses cryptocurrency in terms of ownership, international payments and potential applications beyond investment and trading.

Crypto Kid, who says he has been involved in cryptocurrency since the age of 12, also asks what younger participants should focus on when entering the sector.

Rather than encouraging speculative trading, CZ highlights education and practical understanding of blockchain technology.

“I would actually recommend youngsters not to try that,” CZ says when discussing highly speculative trading.

He encourages younger users to examine the utility of cryptocurrency and learn about applications including micropayments, international transfers and emerging payment systems involving artificial intelligence.

The interview later turns to Bitcoin adoption and recent market performance. CZ acknowledges that he had expected Bitcoin’s price to be higher but maintains a long-term view of cryptocurrency adoption.

He states that “less than 1% of the world” currently uses cryptocurrency, presenting the sector as being at an early stage of global adoption.

The CryptoBreaking feature also covers the ideas behind Freedom of Money. CZ explains that he began drafting the book during a period in prison and later continued revising it as a broader account of his personal journey and his perspective on the development of the cryptocurrency industry since 2013.

The published feature focuses on the central themes of the interview while directing readers to the original video conversation for the complete discussion.
