

Superscript Systems Strengthens Customer Trust with SOC 2 Compliance Powered by Socify

Superscript Systems achieves SOC 2 compliance with Socify, reinforcing its commitment to enterprise trust, data protection, and cybersecurity compliance.

NEW YORK , NY, UNITED STATES,
August 17, 2026 /EINPresswire.com/ --
Superscript Systems, a fintech and AI development company that builds software for complex money movement and AI-powered financial operations. The company has strengthened its commitment to customer trust and data security through SOC 2 compliance powered by Socify by TAC Security.

Socify SOC 2 logo

As AI becomes deeply embedded into business operations, trust is no longer just about product performance. Customers and enterprise buyers now expect clear proof that platforms handling sensitive workflows are secure, controlled, reliable, and audit-ready.

“

We had the controls. What we didn't have was a clean way to show them. Socify gave us that without pulling the team off client work.”

Michael Shmulevich, Founder and CEO, Superscript Systems

Superscript Systems builds financial software for clients whose enterprise customers demand proof of security before a contract gets signed. The controls were already in place across its development process and infrastructure. What the company needed was a structured way to prove them, centralize evidence, and stay audit ready without slowing client delivery.

With Socify, Superscript Systems implemented a SOC 2 program covering Security and Confidentiality. Socify helped Superscript Systems map existing controls to SOC 2 requirements, organize evidence across systems and tools, connect controls to real system behavior, and turn everyday workflows into audit-ready processes.

“Our clients hand us their payment infrastructure, so security questions come up on the first call, not the last. We had the controls. What we didn't have was a clean way to show them. Socify gave us that without pulling the team off client work”, said Michael Shmulevich, Founder and CEO of Superscript Systems.

Through Socify, Superscript achieved clear visibility across systems, controls, and risks, streamlined CPA review through a single Audit Vault, and reduced audit preparation effort by approximately 80%. Socify can help organizations reduce SOC 2 compliance costs by up to 75–80% compared with traditional consulting-led approaches.

Before Socify, Superscript Systems had a strong system but lacked a structured way to prove it. Controls existed but were not clearly defined, and evidence was scattered across tools. After Socify, Superscript Systems built a clear SOC 2 control framework, centralized audit-ready evidence, and established a scalable compliance foundation for future enterprise growth.

Powered by TAC Security, a public cybersecurity company trusted by 10,000+ clients across 100 countries, Socify helps companies make cybersecurity compliance faster, simpler, and more affordable.

With this milestone, Superscript Systems is now better positioned to serve enterprise customers, strengthen buyer confidence, and demonstrate continuous trust as it scales its software development practice.

About Superscript Systems

Superscript Systems builds and maintains the software behind complex money movement. The company works on payment provider integrations, multi-party payouts and revenue splits, KYC and onboarding flows, reconciliation, and agentic AI for financial operations with human approval gates and full audit trails. Founded in 2008 and US-managed with senior dedicated teams, Superscript brings 17 years of production fintech experience and SOC 2 compliance.

About Socify.ai (<https://socify.ai/>)

Socify is a SOC 2 compliance and security operations readiness platform designed to help organizations streamline audit preparation and continuously maintain compliance. It centralizes evidence collection, maps security controls to SOC 2 requirements, and provides real-time visibility into control effectiveness across systems and processes. By automating documentation, tracking gaps, and simplifying auditor collaboration, Socify reduces the manual effort involved in SOC 2 reporting and enables businesses to stay audit-ready with greater speed, accuracy, and consistency.

About TAC Security (TAC InfoSec Limited), NSE: TAC

TAC Security is a publicly listed global cybersecurity company specializing in vulnerability management. Serving 10,000+ clients across 100+ countries, the company is among the world's largest vulnerability management providers by client count. Its flagship platform, ESOF (Enterprise Security in One Framework), enables cyber risk quantification, vulnerability assessment, and AI-driven security analysis. TAC Security holds certifications including CREST and ISO standards, and partners with global technology companies such as Google, Microsoft, and Meta.
