

R.H. Moore Named Authorized Distributor of Profile Products, Expanding Vegetation Establishment Solutions in Florida

Partnership provides customers with the industry's most comprehensive portfolios for soil improvement, vegetation establishment, and long-term erosion control.

ORLANDO, FL, UNITED STATES, August 13, 2026 /EINPresswire.com/ -- R.H. Moore & Associates, one of Florida's leading technical partners for erosion control, stormwater management, geosynthetics, and soil stabilization solutions, has been named an Authorized Distributor of Profile Products, significantly expanding the company's ability to support vegetation establishment and erosion control projects throughout the state.

The new relationship brings Profile's industry-leading portfolio of engineered vegetation establishment products to Florida customers through R.H. Moore's experienced technical sales team, providing access to advanced solutions for everything from rebuilding depleted soils to protecting critical slopes, channels, stormwater facilities, and transportation infrastructure.

"Successful vegetation establishment is about far more than simply applying seed and mulch," said Jeff Peterson, President of R. H. Moore, "Every project presents unique soil conditions, slope characteristics, hydraulic forces, and long-term performance requirements. By becoming an Authorized Distributor of Profile Products, we're able to provide our customers with one of the most complete vegetation establishment solution portfolios available anywhere in the industry."

A Complete Vegetation Establishment System

The expanded Profile portfolio includes engineered solutions for virtually every stage of vegetation establishment, including:

- Engineered Biotic Soil Media
- Hydraulic Mulches
- Engineered Fiber Matrices
- Flexible Growth Media
- Permanent Turf Reinforcement Mats
- Integrated Reinforced Vegetation Systems
- Soil Amendments
- Hydraulic Additives

Among the newest technologies available is ProGanics® DUAL, an innovative product that combines engineered biotic soil media and hydraulic mulch into a single hydraulically applied system, helping contractors improve soil quality while providing immediate erosion protection in one application.

Supporting Better Project Outcomes

The expanded product offering allows R.H. Moore to better support a wide range of Florida projects, including:

- Transportation infrastructure
- Stormwater management facilities
- Highway embankments
- Commercial developments
- Residential communities
- Utility corridors
- Municipal infrastructure
- Environmental restoration
- Shoreline stabilization
- Canal and channel improvements

Rather than promoting individual products, R.H. Moore continues its long-standing approach of helping engineers and contractors identify complete systems that match specific site conditions, constructability requirements, and long-term performance objectives.

More Than Product Availability

According to the company, the new relationship is about much more than expanding inventory.

As a technical partner, R.H. Moore assists customers with:

- Product evaluation
- System selection
- Constructability guidance
- Specification assistance
- Lunch & Learn education
- Field support
- Manufacturer coordination

The addition of Profile Products further strengthens the company's ability to provide engineering-focused solutions across Florida's rapidly growing infrastructure market.

Meeting Florida's Growing Infrastructure Needs

Florida continues to experience significant investment in transportation, commercial development, municipal infrastructure, and stormwater improvements. At the same time, increasingly demanding environmental regulations and more frequent extreme rainfall events have heightened expectations for successful vegetation establishment and long-term erosion control.

The expanded partnership allows R.H. Moore to help owners, engineers, and contractors meet those challenges with proven technologies backed by local technical expertise.

About R.H. Moore & Associates (a [Nexterra Environmental](#) Company)

For more than 40 years, R.H. Moore & Associates has helped engineers, contractors, municipalities, developers, and infrastructure owners solve complex site development and environmental challenges throughout Florida. The company provides technical expertise and engineered solutions for erosion control, sediment control, stormwater management, drainage, geosynthetics, soil stabilization, retaining walls, and vegetation establishment.

Rather than simply supplying products, R.H. Moore partners with customers from concept through construction, providing specification assistance, product selection, constructability guidance, and field support to help deliver successful project outcomes.

About Profile Products

Profile Products is a global leader in vegetation establishment, erosion control, and soil management technologies. For more than 30 years, the company has developed innovative engineered solutions that help establish sustainable vegetation, improve soil performance, protect critical infrastructure, and restore environmentally sensitive sites around the world.

Its comprehensive portfolio includes engineered soil media, hydraulic mulches, engineered fiber matrices, flexible growth media, permanent turf reinforcement mats, soil amendments, and integrated vegetation systems used across transportation, energy, commercial development, stormwater, and environmental restoration projects.
