

Anthem Built Helps Contractors Build a Stronger Pole Barn Repair Business

Illinois manufacturer equips certified installers with patented repair systems, specialized training and ongoing support

VARNA, IL, UNITED STATES, August 18, 2026 /EINPresswire.com/ -- For contractors responding to calls about rotted posts, deteriorating grade boards and failing pole barn foundations, identifying the problem is often easier than finding an efficient way to repair it. Today, Anthem Built helps contractors meet that demand with patent-protected products, specialized equipment and hands-on support developed specifically for post-frame building repairs.

“

Our repair systems can help building owners address deteriorated posts and foundations without the cost and disruption of a complete replacement.”

Mike Smith, CEO/Owner

Varna-based Anthem Built manufactures systems that allow contractors to repair compromised post-frame columns and foundations without relying on the conventional process of removing and completely replacing the affected components. The company’s solutions are designed to reduce labor, simplify installation and provide a durable repair for agricultural, commercial and residential post-frame buildings.

“Contractors throughout the country — especially those serving rural communities — recognize the need for practical solutions to help restore aging pole barn buildings,” said Mike Smith, CEO and owner of Anthem Built. “Our repair systems can help building owners address deteriorated posts and foundations without the cost and disruption of a complete replacement. At the same time, contractors already have many of the skills, equipment and customer relationships needed to serve this market. We provide the proven products, specialized training and ongoing support they need to confidently add pole barn repair to their services, take on more projects and create a valuable new revenue stream for their businesses.”

REPAIR SYSTEMS DEVELOPED FROM REAL JOBSITE EXPERIENCE

Anthem Built's approach grew from decades of experience in construction and manufacturing from various individuals. The team shifted its attention toward post-frame repair and renovation as more property owners began requesting help with deteriorated columns.

One question came up repeatedly: Can you repair rotted-off posts?

Answering that question led the group to develop a repair method that could address deterioration at and below the ground line while significantly reducing the labor required. Most projects using the company's products can be completed by a two-person crew in one day, with some repairs taking only a few hours. Anthem Built not only manufactures the column repair sleeve in house they also design and develop products beyond that including sockets for securing buildings to existing concrete to new construction products.

Anthem Built pole barn repair

Today, Anthem Built's product line includes:

- [Column Repair Sleeves](#): that reinforce columns affected by rot, settlement and deterioration.
- [Column Covers](#): that protect exposed wood and complement the Repair Sleeve system.
- [Repair Sockets](#): that anchor columns to an existing concrete floor or foundation without requiring contractors to remove and repour the concrete.
- Steel Grade Boards: that provide a moisture- and termite-resistant alternative to conventional wood grade boards.

The products can be used in pole barns, machine sheds, garages, commercial buildings, agricultural facilities and other post-frame structures.

MORE THAN A PRODUCT SUPPLIER

Contractors working on structural repairs need more than parts delivered to a jobsite. They need to know the system has been tested in real-world conditions, that their crews understand how to install it and that experienced help is available when an unusual situation arises.

Anthem Built provides its certified installers with the following:

- On-site installation training
- Established installation procedures
- Direct access to knowledgeable technical support

- Direct wholesale pricing from the manufacturer
- Marketing assistance and lead sharing
- Ongoing troubleshooting and problem-solving
- Access to patented and proprietary repair products

This combination allows contractors to approach pole barn repairs with a defined process instead of having to engineer a new solution for every building.

“We’re not simply manufacturing products and sending contractors out to figure things out on their own,” Smith said. “We’re building long-term partnerships by providing the training, specialized tools and ongoing guidance installers need to complete repairs confidently. When an installer encounters a challenging project, we want them to know they can call someone who understands the building, the product and the work happening in the field.”

AN OPPORTUNITY FOR ESTABLISHED CONTRACTORS

Post-frame repair can provide an additional revenue stream for contractors already equipped with trucks, trailers, skid steers, digging equipment and common construction tools. Because many repairs require only a small crew and can be completed quickly, contractors may also be able to schedule the work between larger projects or on days when other jobs are delayed.

The need is substantial. Pole barns and other post-frame buildings throughout the country are aging, leaving property owners searching for practical solutions to rot, settlement and foundation deterioration. By becoming a certified Anthem Built installer, contractors can provide a specialized service in an underserved market while helping customers extend the useful life of their buildings.

All Anthem Built products are manufactured in house. The company’s systems are patent-protected, quality-tested and supported by a team with firsthand post-frame construction and repair experience.

Contractors interested in learning more or becoming certified installers can visit AnthemBuilt.com or call 309-238-5498.

About Anthem Built

Anthem Built, LLC is built around column repair knowledge and many years of engineering and manufacturing experience. Drawing on decades of construction and manufacturing experience, the company develops innovative products that streamline post-frame construction and repair while improving safety, quality and appearance. Anthem Built provides contractors with patent-protected products, specialized tools, training and ongoing support for column repair, foundation replacement and new construction.
