

Sightline Intelligence Doubles Portland Headquarters to Support Rapid Growth in Embedded Vision Intelligence

Headquarters expansion reflects continued investment in engineering talent, product development and long-term growth in the Pacific Northwest

PORTLAND, OR, UNITED STATES,

August 20, 2026 /EINPresswire.com/ -- [Sightline Intelligence](https://www.sightlineintelligence.com), a leader in embedded vision intelligence for mission-critical defense systems, today announced the opening of a newly completed third floor, doubling its Portland headquarters footprint to 15,246 square feet to support continued growth, streamline product innovation, and meet increasing customer demand.

“

Our team has spent nearly two decades solving that challenge, and this expansion reflects both the growing demand for our technology and our confidence in what comes next.”

Jon Atwood, CEO of Sightline Intelligence

The expansion reflects Sightline's ongoing investment in its employees and its long-term commitment to the Portland and broader Pacific Northwest region as the company scales its engineering, product development, and customer support capabilities.

“Defense platforms are generating more video and sensor data than operators can reasonably interpret on their own, and the need for trusted vision intelligence at the edge is only increasing,” said Jon Atwood, CEO of Sightline Intelligence. “Our team has spent nearly two decades

solving that challenge, and this expansion reflects both the growing demand for our technology and our confidence in what comes next. Portland has given us an exceptional base of engineering talent, and our employees are the reason Sightline has been able to grow, innovate, and earn the trust of customers operating in some of the world's most demanding environments.”

Since its founding in 2007, Sightline Intelligence has served as the embedded vision intelligence layer behind mission-critical defense, security, and unmanned systems. Its integrated software is optimized for constrained edge computing environments and combines real-time video

processing, aided target recognition, persistent tracking, and operator decision support. This helps drone OEMs, payload providers, and systems integrators accelerate deployment while reducing engineering effort, integration complexity, and program risk.

The headquarters project marks the latest milestone in a year of significant growth for Sightline Intelligence. Following its rebrand and integration into the Acron Technologies family, the company has accelerated investment in its embedded vision intelligence platform, expanded its capabilities, and strengthened relationships with customers and partners across U.S. and allied defense markets. Earlier this year, the company also more than doubled the size of its Brisbane, Australia office to support the continued growth of its Asia-Pacific operations.

The expanded headquarters provides additional space for engineering, product, operations, and customer support teams while creating capacity for future hiring. The investment underscores Sightline's long-term commitment to Portland and the Pacific Northwest, where the company also maintains an office in Hood River, while reflecting its continued focus on creating high-skilled technical jobs and advancing mission-ready technology in the region.

About Sightline Intelligence

Sightline Intelligence provides embedded vision intelligence for defense, security, unmanned systems, and advanced sensing applications. Proven in mission-critical environments for nearly two decades, Sightline's software and hardware help platforms process video, detect and classify objects, maintain persistent tracks, generate mission-relevant data, and support operator decision-making at the tactical edge. Sightline helps OEMs, payload providers, and systems integrators accelerate deployment, reduce engineering complexity, and deliver reliable capabilities across air, ground and maritime environments.
