

Zylpha Launches Actionstep Integration as Part of Latest Product Update

New connector and platform enhancements streamline document retrieval and accelerate bundle preparation

SOUTHAMPTON, SOUTHAMPTON, UNITED KINGDOM, August 31, 2026 /EINPresswire.com/ -- [Zylpha](#), the UK's leading [electronic court bundling & PDF editing platform](#), has announced the launch of a new integration with legal practice management platform Actionstep, alongside significant improvements to its connector framework and a range of productivity-focused enhancements.

The August product release reinforces Zylpha's commitment to helping legal teams to create court bundles faster, reduce administrative overhead, and work more efficiently within the systems they use every day.

New Actionstep Connector Delivers Seamless Integration

Headlining the latest release is Zylpha's new connector for Actionstep, the cloud-based legal practice management platform used by law firms worldwide.

The integration enables users to access and add documents directly from Actionstep into Zylpha when preparing electronic court bundles. By reducing the need for manual downloads, uploads, and file transfers, the connector creates a more streamlined workflow between matter management and bundle creation.

Tim Long, CEO of Zylpha

Zylpha logo - The Court bundling platform experts

The launch of our Actionstep connector is an important step forward, giving legal professionals a seamless way to access documents from one of the industry's leading practice management platforms. "

Tim Long, CEO Zylpha

As firms increasingly seek to eliminate duplicated processes and improve productivity, the new integration provides a more connected experience that allows legal teams to work with documents already stored within their existing Actionstep environment.

The release forms part of Zylpha's wider strategy to integrate with the platforms legal professionals rely on most, helping users move from document management to court-ready bundles with minimal effort.

Enhanced Connector Framework Improves Speed and Efficiency

Alongside the introduction of the Actionstep connector, Zylpha has completed a major refactor of its connector framework.

While much of the work has taken place behind the scenes, the project delivers enhanced stability, improved reliability, and a stronger foundation for future integrations.

One of the most significant user-facing improvements is the ability for connectors to remember the last location visited when using the Add Documents feature.

Previously, users working across multiple folders within integrated systems would often need to repeatedly navigate back to the same locations when adding files. With the new enhancement, Zylpha automatically remembers where users were last working, reducing unnecessary clicks and helping legal teams retrieve documents more quickly.

The improvement is particularly valuable for matters containing documentation spread across multiple folders and repositories, helping users build complete bundles in less time while simplifying the overall workflow.

Additional Platform Enhancements

The August release also includes several smaller improvements designed to enhance usability and resolve known issues:

- Refreshed context menus provide a cleaner and more intuitive user experience.
- Document sorting by date now works correctly after documents have been processed using Zylpha Auto AI functionality.
- Various styling improvements have been implemented throughout the platform to improve consistency and usability.

Driving Continued Innovation

Commenting on the release, Tim Long, CEO of Zylpha, said:

"This update reflects our continued focus on making court bundling as efficient and friction-free as possible. The launch of our Actionstep connector is an important step forward, giving legal professionals a seamless way to access documents from one of the industry's leading practice management platforms. Equally important are the enhancements we've made to our connector framework, which reduce repetitive actions and help users work faster every day. By continually listening to customer feedback and refining workflows, we're helping legal teams spend less time on administration and more time focused on their cases."

The latest enhancements are available immediately to Zylpha users.
