

PSI Expands Full-Line Fluid Handling Equipment Availability for Houston Industrial Buyers

PSI consolidates pumps, material handling, gas management, and filtration equipment under one source for oil, gas, construction, and industrial operators.

HOUSTON, TX, UNITED STATES, August 18, 2026 /EINPresswire.com/ -- Process Solutions International (PSI), a [global manufacturer and supplier of fluid handling equipment](#) since 1991, announced that its full line of fluid handling equipment is available to [Houston-area industrial buyers](#). The

move addresses a common pain point for operators who currently source pumps, mixing equipment, gas management systems, and filtration equipment from multiple vendors.

PSI Fluid Handling Equipment Houston

One Source for Complete Fluid Handling Systems

“

Our customers can now specify and order, or get servicing for pumps, mixing, gas management, and filtration equipment through one team that understands how these systems work together.”

Kye Keliehor

Houston's oil and gas, construction, and industrial sectors rely on multiple categories of equipment to keep fluid systems running, often pulling from separate suppliers for pumps, mixing and conveying equipment, gas separation systems, and filtration. PSI's Houston operations offer all four categories from one supplier, including:

Industrial pumps, including centrifugal, self-priming, and progressive cavity models

Material handling equipment, including mud agitators, mud guns, screw conveyors, and high shear hoppers

Gas management systems, including vacuum degassers, atmospheric degassers, and mud gas separators

Cleaning and filtration systems, including fuel filtration, dewatering systems, and shaker screen cleaners

"Operators don't want to manage five different vendor relationships just to keep a fluid system

running," said Kye Keliehor of Process Solutions International. "Our customers can now specify and order, or get servicing for pumps, mixing equipment, gas management systems, and filtration equipment through one team that understands how these systems work together."

Built for Houston's Industrial Base

Houston's position as a hub for oilfield services, energy, and heavy industry means fast turnaround and equipment compatibility matter as much as price. PSI's Houston facility, across its [full product range of fluid handling equipment](#), supports this by stocking equipment and providing engineering support for buyers integrating new equipment into existing fluid systems.

PSI has been in the fluid handling business since 1991, expanding from its global headquarters to serve customers across five continents, including operations in the Permian Basin, Gulf Coast, Canada, and the Middle East. The company holds ISO 9001 certification and manufactures equipment to UL, ATEX/IECEX, CEMA, and ANSI/API standards.

About Process Solutions International

Process Solutions International is a global manufacturer and supplier of fluid handling, material handling, gas management, and cleaning and filtration equipment, serving the oil and gas, construction, mining, and industrial sectors since 1991. PSI is ISO 9001 certified and manufactures its proprietary MAX2000®, MAKDADDY®, and vAK® equipment lines to UL, ATEX/IECEX, CEMA, and ANSI/API standards.
